

The background of the cover features several mathematical diagrams. In the upper left, there is a unit circle with a point (x, y) on its circumference. A radius line connects the origin to this point, and its angle with the positive x-axis is labeled θ . The horizontal distance from the y-axis to the point is labeled $\sin \frac{\theta}{2}$, and the vertical distance from the x-axis to the point is labeled $\cos \frac{\theta}{2}$. In the upper right, there is a coordinate plane with a grid. A yellow line starts from the bottom left and extends diagonally towards the top right, passing through the center of the cover. The overall background is a dark blue with faint, light blue mathematical curves and lines.

A Tour Of The Calculus:

A Tour of the Calculus David Berlinski, 1997-01-28 Were it not for the calculus mathematicians would have no way to describe the acceleration of a motorcycle or the effect of gravity on thrown balls and distant planets or to prove that a man could cross a room and eventually touch the opposite wall Just how calculus makes these things possible and in doing so finds a correspondence between real numbers and the real world is the subject of this dazzling book by a writer of extraordinary clarity and stylistic brio Even as he initiates us into the mysteries of real numbers functions and limits Berlinski explores the furthest implications of his subject revealing how the calculus reconciles the precision of numbers with the fluidity of the changing universe An odd and tantalizing book by a writer who takes immense pleasure in this great mathematical tool and tries to create it in others New York Times Book Review
