Aircraft Design Projects For Engineering Students:

Aircraft Design Projects Lloyd R. Jenkinson, Jim Marchman, 2003-04-28 Written with students of aerospace or aeronautical engineering firmly in mind this is a practical and wide ranging book that draws together the various theoretical elements of aircraft design structures aerodynamics propulsion control and others and guides the reader in applying them in practice Based on a range of detailed real life aircraft design projects including military training commercial and concept aircraft the experienced UK and US based authors present engineering students with an essential toolkit and reference to support their own project work All aircraft projects are unique and it is impossible to provide a template for the work involved in the design process However with the knowledge of the steps in the initial design process and of previous experience from similar projects students will be freer to concentrate on the innovative and analytical aspects of their course project The authors bring a unique combination of perspectives and experience to this text It reflects both British and American academic practices in teaching aircraft design Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK and Jim Marchman has taught both aircraft and spacecraft design at Virginia Tech in the US Demonstrates how basic aircraft design processes can be successfully applied in reality Case studies allow both student and instructor to examine particular design challenges Covers commercial and successful student design projects and includes over 200 high quality illustrations

Aerodynamics and Aircraft Performance James F. Marchman, 2004-08 Aerodynamics and Aircraft Performance 3rd edition is a college undergraduate level introduction to aircraft aerodynamics and performance This text is designed for a course in Aircraft Performance that is taught before the students have had any course in fluid mechanics fluid dynamics or aerodynamics The text is meant to provide the essential information from these types of courses that is needed for teaching basic subsonic aircraft performance and it is assumed that the students will learn the full story of aerodynamics in other later courses The text assumes that the students will have had a university level Physics sequence in which they will have been introduced to the most fundamental concepts of statics dynamics fluid mechanics and basic conservation laws that are needed to understand the coverage that follows It is also assumed that students will have completed first year university level calculus sequence plus a course in multi variable calculus Separate courses in engineering statics and dynamics are helpful but not necessary Any student who takes a course using this text after completing courses in aerodynamics or fluid dynamics should find the chapters of this book covering those subjects an interesting review of the material The 236 page text was created specifically for use by undergraduate students in Aerospace Engineering and was based on Professor Marchman's many years of experience teaching related subject matter as well as his numerous wind tunnel research projects related to aircraft aerodynamics and his personal experience as the owner and pilot of a general aviation airplane It has been used at Virginia Tech and other universities

Finite Element Multidisciplinary Analysis Kajal K. Gupta, J. L. Meek, 2003 Annotation This book fills a gap within the finite element literature by addressing the

challenges and developments in multidisciplinary analysis Current developments include disciplines of structural mechanics heat transfer fluid mechanics controls engineering and propulsion technology and their interaction as encountered in many practical problems in aeronautical aerospace and mechanical engineering among others These topics are reflected in the 15 chapter titles of the book Numerical problems are provided to illustrate the applicability of the techniques Exercises may be solved either manually or by using suitable computer software A version of the multidisciplinary analysis program STARS is available from the author As a textbook the book is useful at the senior undergraduate or graduate level The practicing engineer will find it invaluable for solving full scale practical problems

Engineering Education During the First Century of Flight Barnes Warnock McCormick, Conrad F. Newberry, Eric Jumper, 2004 On 17 December 1903 at Kitty Hawk NC the Wright brothers succeeded in achieving controlled flight in a heavier than air machine This feat was accomplished by them only after meticulous experiments and a study of the work of others before them like Sir George Cayley Otto Lilienthal and Samuel Langley The first evidence of the academic community becoming interested in human flight is found in 1883 when Professor J J Montgomery of Santa Clara College conducted a series of glider tests Seven years later in 1890 Octave Chanute presented a number of lectures to students of Sibley College

Cornell University entitled Aerial Navigation This book is a collection of papers solicited from U S universities or institutions with a history of programs in Aerospace Aeronautical engineering There are 69 institutions covered in the 71 chapters This collection of papers represents an authoritative story of the development of educational programs in the nation that were devoted to human flight Most of these programs are still in existence but there are a few papers covering the history of programs that are no longer in operation documented in Part I as well as the rapid expansion of educational programs relating to aeronautical engineering that took place in the 1940s Part II is devoted to the four schools that were pioneers in establishing formal programs Part III describes the activities of the Guggenheim Foundation that spurred much of the development of programs in aeronautical engineering Part IV covers the 48 colleges and universities that were formally established in the mid 1930s to the present The military institutions are grouped together in the Part V and Part VI presents the histories of those programs that evolved from proprietary institutions
