## **Aircraft Wake Turbulence And Its Detection Proceedings:**

**Aircraft Wake Turbulence and Its Detection** John Olsen, 2012-12-06 The combination of increasing airport congestion and the advent of large transports has caused increased interest in aircraft wake turbulence A quantitative understanding of the interaction between an aircraft and the vortex wake of a preceding aircraft is necessary for planning future high density air traffic patterns and control systems The nature of the interaction depends on both the characteristics of the following aircraft and the characteristics of the wake Some of the questions to be answered are What determines the full characteristics of the vortex wake What properties of the following aircraft are important What is the role of pilot response How are the wake characteristics related to the generating aircraft parameters How does the wake disintegrate and where Many of these questions were addressed at this first Aircraft Wake Turbulence Symposium sponsored by the Air Force Office of Scientific Research and The Boeing Company Workers engaged in aerodynamic research airport operations and instrument development came from several countries to present their results and exchange information The new results from the meeting provide a current picture of the state of the knowledge on vortex wakes and their interactions with other aircraft Phenomena previously regarded as mere curiosities have emerged as important tools for understanding or controlling vortex wakes The new types of instability occurring within the wake may one day be used for promoting early disintegration of the hazardous twin vortex structure [Aircraft Wake Turbulence and Its Detection](#) J.H. Injuries due to air turbulence has increased recently therefore there is considerable concern and interest in understanding and detecting it more accurately Presently hardly any research deals with air turbulence detection using remote sensing images Most works use conventional optical remote sensing data with classical methods such as a library spectral signature band ratio and principal component analysis without designating new methods and technology Very little research has attempted to implement optical and microwave remote sensing images for air turbulence detections This book provides new image processing procedures for air turbulence detection using advanced remote sensing images and quantum image processing Currently there is a huge gap between research work in the field of air turbulence detection and advanced remote sensing technology Most of the theories are not operated in terms of software modules Most of the software packages in the field of remote sensing images cannot deal with advanced image processing techniques in air turbulence detections due to heavy mathematics work In this view this book fills a gap between advanced remote sensing technology and air turbulence detection For instance quantum image processing with a new generation of remote sensing technology such as RADARSAT 2 SAR images is also implemented to provide accurate air turbulence detections **NASA Technical Paper**, 1985 □□□□□
