Recent Advances in Systems Safety and Security Emil Pricop, Grigore Stamatescu, 2016-05-25 This book represents a timely overview of advances in systems safety and security based on selected revised and extended contributions from the 2nd and 3rd editions of the International Workshop on Systems Safety and Security IWSSS held in 2014 and 2015 respectively in Bucharest Romania It includes 14 chapters co authored by 34 researchers from 7 countries The book provides an useful reference from both theoretical and applied perspectives in what concerns recent progress in this area of critical interest Contributions broadly grouped by core topic address challenges related to information theoretic methods for assuring systems safety and security cloud based solutions image processing approaches distributed sensor networks and legal or risk analysis viewpoints These are mostly accompanied by associated case studies providing additional practical value and underlying the broad relevance and impact of the field *Artificial Mathematical Intelligence* Danny A. J. Gómez Ramírez, 2020-10-23 This volume discusses the theoretical foundations of a new inter and intra disciplinary meta research discipline which can be succinctly called cognitive metamathematics with the ultimate goal of achieving a global instance of concrete Artificial Mathematical Intelligence AMI In other words AMI looks for the construction of an ideal global artificial agent being able to co solve interactively formal problems with a conceptual mathematical description in a human style way It first gives formal guidelines from the philosophical logical meta mathematical cognitive and computational points of view supporting the formal existence of such a global AMI framework examining how much of current mathematics can be completely generated by an interactive computer program and how close we are to constructing a machine that would be able to simulate the way a modern working mathematician handles solvable mathematical conjectures from a conceptual point of view The thesis that it is possible to meta model the intellectual job of a working mathematician is heuristically supported by the computational theory of mind which posits that the mind is in fact a computational system and by the meta fact that genuine mathematical proofs are in principle algorithmically verifiable at least theoretically The introduction to this volume provides then the grounding multifaceted principles of cognitive metamathematics and at the same time gives an overview of some of the most outstanding results in this direction keeping in mind that the main focus is human style proofs

and not simply formal verification The first part of the book presents the new cognitive foundations of mathematics program dealing with the construction of formal refinements of seminal meta mathematical notions and facts The second develops positions and formalizations of a global taxonomy of classic and new cognitive abilities and computational tools allowing for calculation of formal conceptual blends are described In particular a new cognitive characterization of the Church Turing Thesis is presented In the last part classic and new results concerning the co generation of a vast amount of old and new mathematical concepts and the key parts of several standard proofs in Hilbert style deductive systems are shown as well filling explicitly a well known gap in the mechanization of mathematics concerning artificial conceptual generation

Theoretical Aspects of Computer Software Takayasu Itō, Albert R. Meyer, 1991-08-28 TACS 91 is the first International Conference on Theoretical Aspects of Computer Science held at Tohoku University Japan in September 1991 This volume contains 37 papers and an abstract for the talks presented at the conference TACS 91 focused on theoretical foundations of programming and theoretical aspects of the design analysis and implementation of programming languages and systems The following range of topics is covered logic proof specification and semantics of programs and languages theories and models of concurrent parallel and distributed computation constructive logic category theory and type theory in computer science theory based systems for specifying synthesizing transforming testing and verifying software **Towards Mechanized Mathematical Assistants** Manuel Kauers, 2007-06-19 This book constitutes the refereed proceedings of the 6th International Conference on Mathematical Knowledge Management MKM 2007 and the 14th Symposium on the Integration of Symbolic Computation and Mechanized Reasoning Calculemus 2006 held in Hagenberg Austria in June 2007 as events of the RISC Summer 2007 organized by the Research Institute for Symbolic Computation IEEE Joint International Conference on Requirements Engineering ,2002 This text contains information on software design and development as presented at the 10th Anniversary IEEE Joint International Requirements Engineering RE 2002
