The Informatics Handbook S.A. Fist, 2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major

converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science

Visualization in Modern Cartography A.M. MacEachren, D.R. Fraser Taylor, 2013-10-22 Visualization in Modern Cartography explores links between the centuries old discipline of cartography and today's revolutionary developments in scientific visualization The book has three main goals 1 to pass on design and symbolization expertise to the scientific

visualization community information that comes from centuries of pre computer visualization by cartographers and their more recent experiences with computerizing the discipline 2 to help cartographers cope with the dramatic shift from print cartography to a dynamic virtual cartography for which their role is changing from that of map designer to one of spatial information display and or interface designer 3 to illustrate the expanded role for cartography in geographic environmental planning and earth science applications that comes with the development of interactive geographic visualization tools To achieve these goals the book is divided into three parts The first sets the historical cognitive and technological context for geographic cartographic visualization tool development The second covers key technological symbolization and user interface issues The third provides a detailed look at selected prototype geographic cartographic visualization tools and their applications
