learning **A Transformation Gap?** Theo Farrell, Terriff Terry, Osinga Frans, 2010-04-07 NATO member states are all undergoing some form of military transformation. Despite a shared vision, transformation has been primarily a US led process centered on the exploitation of new information technologies in combination with new concepts for networked organizations and effects based operations. Simply put, European states have been unable to match the level of US investment in new military technologies, leading to the identification of a growing transformation gap between the US and the European allies. This book assesses the extent and trajectory of military transformation across a range of European NATO member states, setting their transformation progress against that of the US and examining the complex mix of factors driving military transformation in each country. It reveals not only the nature and extent of the transatlantic gap but also identifies an enormous variation in the extent and pace of transformation among the European allies, suggesting both technological and operational gaps within Europe. *Internationalization and Imprints of the Pandemic on Higher Education Worldwide* Alexander W. Wiseman, Cheryl Matherly, Max Crumley-Effinger, 2023-06-27 This volume chronicles changes and issues facing institutional and individual academic activities and norms following the Covid 19 pandemic, forecasting their impacts on the ways in which internationalization at the post secondary level has responded in practice to new realities, exigencies and possibilities. **Telecollaboration in Translator Education** Mariusz Marczak, 2023-11-24 This volume provides a comprehensive treatment of telecollaboration as a learning mode in translator education, surveying the state of the art, exploring its distinctive challenges and affordances, and outlining future directions in both theoretical and practical terms. The book begins with an overview of telecollaboration and its rise in prominence in today's globalised world, one in which developments in technology have significantly impacted practices in professional translation and translator education. The volume highlights basic design types and assessment modes and their use in achieving competence based learning outcomes, drawing on examples from seven telecollaboration projects. In incorporating real life research, Marczak draws readers' attention to not only the practical workings of different types of projects and their attendant challenges but also the opportunities for educators to diversify and optimize their instructional practices and for budding translators to build competence and better secure their future employability in the language service provision industry. This volume will be a valuable resource for students and researchers in translation studies, particularly those with an interest in translator education and translation technology, as well as stakeholders in the professional translation industry.
