Advanced Mathematics For Economists Static And Dynamic Optimization:

Advanced Math for Economics Peter Lambert, 1985 This book contains a compact accessible treatment of the main mathematical topics encountered in economics at an advanced level moving from basic material into the twin areas of static and dynamic optimization Nearly half of the book is devoted to a survey of univariate calculus matrix algebra and multivariate calculus This fundamental material is made vigorous by the inclusion of a variety of applications The later chapters focus on the Lagrange multiplier technique when it will work why it works and what economic insights it yields The properties of maximum value functions and duality are explored as are the Hamiltonian conditions for dynamic problems in the optimal control format Dynamic programming and the calculus of variations are also covered Much of the discussion proceeds at a heuristic level and by worked example but the theorems and proofs required by the most analytical user are also to be found The underlying message is that the language of mathematics can be productive giving expression to the ideas and facilitating approaches from which insights flow that may be hard to come by in other ways The book will be particularly useful for final year undergraduates doing mathematics for economists courses and postgraduate students

Basic Mathematics for Economics, Business and Finance EK Ummer, 2012-03-15 This book can help overcome the widely observed math phobia and math aversion among undergraduate students in these subjects The book can also help them understand why they have to learn different mathematical techniques how they can be applied and how they will equip the students in their further studies The book provides a thorough but lucid exposition of most of the mathematical techniques applied in the fields of economics business and finance The book deals with topics right from high school mathematics to relatively advanced areas of integral calculus covering in the middle the topics of linear algebra differential calculus classical optimization linear and nonlinear programming and game theory Though the book directly caters to the needs of undergraduate students in economics business and finance graduate students in these subjects will also definitely find the book an invaluable tool as a supplementary reading The website of the book www.emeacollege.ac.in/bmebf provides supplementary materials and further readings on chapters on difference equation differential equations elements of Mathematica and graphics in Mathematica It also provides materials on the applications of Mathematica as well as teacher and student manuals

Financial Economics, Risk And Information (2nd Edition) Marcelo Bianconi, 2011-11-29 Financial Economics Risk and Information presents the fundamentals of finance in static and dynamic frameworks with focus on risk and information The objective of this book is to introduce undergraduate and first year graduate students to the methods and solutions of the main problems in finance theory relating to the economics of uncertainty and information The main goal of the second edition is to make the materials more accessible to a wider audience of students and finance professionals The focus is on developing a core body of theory that will provide the student with a solid intellectual foundation for more advanced topics and methods The new edition has streamlined chapters and topics with new sections on portfolio choice

under alternative information structures The starting point is the traditional mean variance approach followed by portfolio choice from first principles The topics are extended to alternative market structures alternative contractual arrangements and agency dynamic stochastic general equilibrium in discrete and continuous time attitudes towards risk and towards inter temporal substitution in discrete and continuous time and option pricing In general the book presents a balanced introduction to the use of stochastic methods in discrete and continuous time in the field of financial economics
