EJBRM Volume 9 Issue 1, **Model-based Reasoning about Learner Behaviour** Kees de Koning, 1997 Simulators are becoming standard equipment for interactive learning environments They allow for attractive teaching with a large degree of freedom for the learner However without proper guidance the learner easily gets lost in a simulation environment Providing guidance requires an image of what the learner is doing Acquiring this image by diagnosing the behaviour of the learner is a complex and resource intensive task for which yet no general approach exists In this book we apply existing ideas and techniques from the field of model based reasoning and diagnosis to interactive learning environments We present a framework for subject matter modelling and diagnosis of learner behaviour The framework defines generic techniques for automatically generating subject matter models from qualitative simulations A generic model based engine employs these models for diagnosing the learner s behaviour The framework provides a powerful and reusable approach to individualising guidance in educational systems
