Advances In Mathematics Volume 8 9:

Iitaka Conjecture Osamu Fujino, 2020-04-09 The ambitious program for the birational classification of higher dimensional complex algebraic varieties initiated by Shigeru Iitaka around 1970 is usually called the Iitaka program. Now it is known that the heart of the Iitaka program is the Iitaka conjecture which claims the subadditivity of the Kodaira dimension for fiber spaces. The main purpose of this book is to make the Iitaka conjecture more accessible. First Viehweg's theory of weakly positive sheaves and big sheaves is described and it is shown that the Iitaka conjecture follows from the Viehweg conjecture. Then the Iitaka conjecture is proved in some special and interesting cases. A relatively simple new proof of Viehweg's conjecture is given for fiber spaces whose geometric generic fiber is of general type based on the weak semistable reduction theorem due to Abramovich, Karu and the existence theorem of relative canonical models by Birkar, Cascini, Hacon, McKernan. No deep results of the theory of variations of Hodge structure are needed. The Iitaka conjecture for fiber spaces whose base space is of general type is also proved as an easy application of Viehweg's weak positivity theorem and the Viehweg conjecture for fiber spaces whose general fibers are elliptic curves is explained. Finally the subadditivity of the logarithmic Kodaira dimension for morphisms of relative dimension one is proved. In this book for the reader's convenience known arguments as well as some results are simplified and generalized with the aid of relatively new techniques. Year 10

Advanced Mathematics Lyn Baker, 2006 Revises the NSW Year 10 Stage 5.3 Mathematics course. Cover **Computing the Continuous Discretely** Matthias Beck, Sinai Robins, 2015-11-14 This richly illustrated textbook explores the amazing interaction between combinatorics, geometry, number theory and analysis which arises in the interplay between polyhedra and lattices. Highly accessible to advanced undergraduates as well as beginning graduate students, this second edition is perfect for a capstone course and adds two new chapters, many new exercises and updated open problems. For scientists, this text can be utilized as a self-contained tooling device. The topics include a friendly invitation to Ehrhart's theory of counting lattice points in polytopes, finite Fourier analysis, the Frobenius coin exchange problem, Dedekind sums, solid angles, Euler-Maclaurin summation for polytopes, computational geometry, magic squares, zonotopes and more. With more than 300 exercises and open research problems, the reader is an active participant carried through diverse but tightly woven mathematical fields that are inspired by an innocently elementary question: What are the relationships between the continuous volume of a polytope and its discrete volume? Reviews of the first edition: You owe it to yourself to pick up a copy of *Computing the Continuous Discretely* to read about a number of interesting problems in geometry, number theory and combinatorics. MAA Reviews: The book is written as an accessible and engaging textbook with many examples, historical notes, pithy quotes, commentary, integrating the material, exercises, open problems and an extensive bibliography. Zentralblatt MATH: This beautiful book presents at a level suitable for advanced undergraduates a fairly complete introduction to the problem of counting lattice points inside a convex polyhedron. Mathematical Reviews: Many departments recognize the need

for capstone courses in which graduating students can see the tools they have acquired come together in some satisfying way

Beck and Robins have written the perfect text for such a course **CHOICE** *Geometric Invariant Theory for Polarized Curves* Gilberto Bini, Fabio Felici, Margarida Melo, Filippo Viviani, 2014-11-07 We investigate GIT quotients of polarized curves More specifically we study the GIT problem for the Hilbert and Chow schemes of curves of degree d and genus g in a projective space of dimension $d+g$ as d decreases with respect to g We prove that the first three values of d at which the GIT quotients change are given by $d \geq 2g+2$ where $a \leq 2 \leq 3 \leq 5 \leq 4$ We show that for $a \leq 4$ L Caporaso's results hold true for both Hilbert and Chow semistability If $3 \leq 5a$ **Dynamics: Topology and Numbers** Pieter Moree, Anke Pohl, L'ubomír Snoha, Tom Ward, 2020-02-12 This volume contains the proceedings of the conference Dynamics Topology and Numbers held from July 26-6 2018 at the Max Planck Institute for Mathematics Bonn Germany The papers cover diverse fields of mathematics with a unifying theme of relation to dynamical systems These include arithmetic geometry flat geometry complex dynamics graph theory relations to number theory and topological dynamics The volume is dedicated to the memory of Sergiy Kolyada and also contains some personal accounts of his life and mathematics

Quaternion Algebras John Voight, 2021-06-28 This open access textbook presents a comprehensive treatment of the arithmetic theory of quaternion algebras and orders a subject with applications in diverse areas of mathematics Written to be accessible and approachable to the graduate student reader this text collects and synthesizes results from across the literature Numerous pathways offer explorations in many different directions while the unified treatment makes this book an essential reference for students and researchers alike Divided into five parts the book begins with a basic introduction to the noncommutative algebra underlying the theory of quaternion algebras over fields including the relationship to quadratic forms An in depth exploration of the arithmetic of quaternion algebras and orders follows The third part considers analytic aspects starting with zeta functions and then passing to an idelic approach offering a pathway from local to global that includes strong approximation Applications of unit groups of quaternion orders to hyperbolic geometry and low dimensional topology follow relating geometric and topological properties to arithmetic invariants Arithmetic geometry completes the volume including quaternionic aspects of modular forms supersingular elliptic curves and the moduli of QM abelian surfaces Quaternion Algebras encompasses a vast wealth of knowledge at the intersection of many fields Graduate students interested in algebra geometry and number theory will appreciate the many avenues and connections to be explored Instructors will find numerous options for constructing introductory and advanced courses while researchers will value the all embracing treatment Readers are assumed to have some familiarity with algebraic number theory and commutative algebra as well as the fundamentals of linear algebra topology and complex analysis More advanced topics call upon additional background as noted though essential concepts and motivation are recapped throughout

Arithmetic, Geometry, Cryptography and Coding Theory Alp Bassa, Alain Couvreur, David Kohel, 2017-03-27 This volume contains the proceedings of the 15th International Conference on Arithmetic

Geometry Cryptography and Coding Theory AGCT held at the Centre International de Rencontres Mathématiques in Marseille France from May 18-22 2015 Since the first meeting almost 30 years ago the biennial AGCT meetings have been one of the main events bringing together researchers interested in explicit aspects of arithmetic geometry and applications to coding theory and cryptography This volume contains original research articles reflecting recent developments in the field

Commutative Algebra: 150 Years with Roger and Sylvia Wiegand Nicholas R. Baeth, Thiago H. Freitas, Graham J. Leuschke, Victor H. Jorge Pérez, 2021-10-06 This volume contains the combined Proceedings of the Second International Meeting on Commutative Algebra and Related Areas SIMCARA held from July 22-26 2019 at the Universidade de São Paulo São Carlos Brazil and the AMS Special Session on Commutative Algebra held from September 14-15 2019 at the University of Wisconsin-Madison Wisconsin These two meetings celebrated the combined 150th birthday of Roger and Sylvia Wiegand The Wiegands have been a fixture in the commutative algebra community as well as the wider mathematical community for over 40 years Articles in this volume cover various areas of factorization theory homological algebra ideal theory representation theory homological rigidity maximal Cohen-Macaulay modules and the behavior of prime spectra under completion as well as some topics in related fields The volume itself bears evidence that the area of commutative algebra is a vibrant one and highlights the influence of the Wiegands on generations of researchers It will be useful to researchers and graduate students

Homotopy Invariant Algebraic Structures Jean-Pierre Meyer, 1999 This volume presents the proceedings of the conference held in honor of J. Michael Boardman's 60th birthday It brings into print his classic work on conditionally convergent spectral sequences Over the past 30 years it has become evident that some of the deepest questions in algebra are best understood against the background of homotopy theory Boardman and Vogt's theory of homotopy theoretic algebraic structures and the theory of spectra for example were two benchmark breakthroughs underlying the development of algebraic K-theory and the recent advances in the theory of motives The volume begins with short notes by Mac Lane May Stasheff and others on the early and recent history of the subject But the bulk of the volume consists of research papers on topics that have been strongly influenced by Boardman's work Articles give readers a vivid sense of the current state of the theory of homotopy invariant algebraic structures Also included are two major foundational papers by Goerss and Strickland on applications of methods of algebraic geometry: Dieudonné modules and formal schemes to problems of topology Boardman is known for the depth and wit of his ideas This volume is intended to reflect and to celebrate those fine characteristics
