Advances In Digital And Computational Geometry:

Advances in Digital and Computational Geometry Reinhard Klette, Azriel Rosenfeld, Fridrich Sloboda, 1998-09 Digital geometry deals with geometric properties of subsets of digital images or equivalently with geometric properties of finite sets of lattice points Digital geometry can anticipate progress in imaging technology allowing higher and higher spatial resolution It seems that the input data in both fields will converge to data embedded in digital arrays of very high spatial resolution

Digital and Image Geometry Gilles Bertrand, Atsushi Imiya, Reinhard Klette, 2003-07-31 Images or discrete objects to be analyzed based on digital image data need to be represented analyzed transformed recovered etc These problems have stimulated many interesting developments in theoretical foundations of image processing This coherent anthology presents 27 state of the art surveys and research papers on digital image geometry and topology It is based on a winter school held at Dagstuhl Castle Germany in December 2000 and offers topical sections on topology representation geometry multigrid convergence and shape similarity and simplification

Computer Vision. ECCV 2002 Part 2. Anders Heyden, 2002-05-17 The four volume set comprising LNCS volumes 2350 2351 2352 2353 constitutes the refereed proceedings of the 7th European Conference on Computer Vision ECCV 2002 held in Copenhagen Denmark in May 2002 The 226 revised full papers presented were carefully reviewed and selected from a total of around 600 submissions The four books offer topical sections on active and real time vision image features visual motion surface geometry grouping and segmentation stereoscopic vision structure from motion shape object recognition color and shading vision systems statistical learning robot vision and calibration

Computer Analysis of Images and Patterns Nicolai Petkov, 2003-08-14 This book constitutes the refereed proceedings of the 10th International Conference on Computer Analysis of Images and Patterns CAIP 2003 held in Groningen The Netherlands in August 2003 The 94 revised papers presented were carefully reviewed and selected from 160 submissions The papers are organized in topical sections on analysis and understanding video analysis segmentation shape classification face recognition interpolation and spatial transformations and filtering

Foundations of Image Understanding Larry S. Davis, 2012-12-06 Computer systems that analyze images are critical to a wide variety of applications such as visual inspections systems for various manufacturing processes remote sensing of the environment from space borne imaging platforms and automatic diagnosis from X rays and other medical imaging sources Professor Azriel Rosenfeld the founder of the field of digital image analysis made fundamental contributions to a wide variety of problems in image processing pattern recognition and computer vision Professor Rosenfeld's previous students postdoctoral scientists and colleagues illustrate in *Foundations of Image Understanding* how current research has been influenced by his work as the leading researcher in the area of image analysis for over two decades Each chapter of *Foundations of Image Understanding* is written by one of the world's leading experts in his area of specialization examining digital geometry and topology early research which laid the foundations for many industrial machine vision systems edge detection and segmentation

fundamental to systems that analyze complex images of our three dimensional world multi resolution and variable resolution representations for images and maps parallel algorithms and systems for image analysis and the importance of human psychophysical studies of vision to the design of computer vision systems Professor Rosenfeld s chapter briefly discusses topics not covered in the contributed chapters providing a personal historical perspective on the development of the field of image understanding Foundations of Image Understanding is an excellent source of basic material for both graduate students entering the field and established researchers who require a compact source for many of the foundational topics in image analysis

Digital Image Processing Algorithms and Applications Ioannis Pitas,2000-02-22 A unique collection of algorithms and lab experiments for practitioners and researchers of digital image processing technology With the field of digital image processing rapidly expanding there is a growing need for a book that would go beyond theory and techniques to address the underlying algorithms Digital Image Processing Algorithms and Applications fills the gap in the field providing scientists and engineers with a complete library of algorithms for digital image processing coding and analysis Digital image transform algorithms edge detection algorithms and image segmentation algorithms are carefully gleaned from the literature for compatibility and a track record of acceptance in the scientific community The author guides readers through all facets of the technology supplementing the discussion with detailed lab exercises in EIKONA his own digital image processing software as well as useful PDF transparencies He covers in depth filtering and enhancement transforms compression edge detection region segmentation and shape analysis explaining at every step the relevant theory algorithm structure and its use for problem solving in various applications The availability of the lab exercises and the source code all algorithms are presented in C code over the Internet makes the book an invaluable self study guide It also lets interested readers develop digital image processing applications on ordinary desktop computers as well as on Unix machines

Fundamentals of Three-dimensional Digital Image Processing Junichiro Toriwaki,Hiroyuki Yoshida,2009-04-23 This book is a detailed description of the basics of three dimensional digital image processing A 3D digital image abbreviated as 3D image below is a digitalized representation of a 3D object or an entire 3D space stored in a computer as a 3D array Whereas normal digital image processing is concerned with screens that are a collection of square shapes called pixels and their corresponding density levels the image plane in three dimensions is represented by a division into cubical graphical elements called voxels that represent corresponding density levels In the context of image processing in many cases 3D image processing will refer to the input of multiple 2D images and performing processing in order to understand the 3D space or scene that they depict This is a result of research into how to use input from image sensors such as television cameras as a basis for learning about a 3D scene thereby replicating the sense of vision for humans or intelligent robots and this has been the central problem in image processing research since the 1970s However a completely different type of image with its own new problems the 3D digital image discussed in this book rapidly took prominence in the 1980s particularly in the field of medical imaging These were

recordings of human bodies obtained through computed or computerized tomography CT images that recorded not only the external visible surface of the subject but also to some degree of resolution its internal structure. This was a type of image that no one had experienced before.

Combinatorial Image Analysis Jake K. Aggarwal, Reneta P. Barneva, Valentin E. Brimkov, Kostadin N. Koroutchev, Elka R. Korutcheva, 2011-05-14 This volume constitutes the refereed proceedings of the 14th International Workshop on Combinatorial Image Analysis IWCIA 2011 held in Madrid Spain in May 2011. The 25 revised full papers and 13 poster papers presented together with 4 invited contributions were carefully reviewed and selected from 60 submissions. The papers are organized in topical sections such as combinatorial problems in the discrete plane and space related to image analysis lattice polygons and polytopes discrete combinatorial geometry and topology and their use in image analysis digital geometry of curves and surfaces tilings and patterns combinatorial pattern matching image representation segmentation grouping and reconstruction methods for image compression discrete tomography applications of integer programming linear programming and computational geometry to problems of image analysis parallel architectures and algorithms for image analysis fuzzy and stochastic image analysis grammars and models for image or scene analysis and recognition cellular automata mathematical morphology and its applications to image analysis applications in medical imaging biometrics and others.

Computer Analysis of Images and Patterns André Gagalowicz, Wilfried Philips, 2005-09-27 This volume presents the proceedings of the 11th International Conference on Computer Analysis of Images and Patterns CAIP 2005. This conference series started about 20 years ago in Berlin. Initially the conference served as a forum for meetings between scientists from Western and Eastern block countries. Nowadays the conference attracts participants from all over the world. The conference gives equal weight to posters and oral presentations and the selected presentation mode is based on the most appropriate communication medium. The program follows a single track format rather than parallel sessions. Non overlapping oral and poster sessions ensure that all attendees have the opportunity to interact personally with presenters. As for the numbers we received a total of 185 submissions. All papers were reviewed by two to four members of the Program Committee. The final selection was carried out by the Conference Chairs. Out of the 185 papers 65 were selected for oral presentation and 43 as posters. CAIP is becoming well recognized internationally and this year's presentations came from 26 different countries. South Korea proved to be the most active scientifically with a total of 16 accepted papers. At this point we wish to thank the Program Committee and additional referees for their timely and high quality reviews. The paper's mission and review procedure was carried out electronically. We also thank the invited speakers Reinhardt Koch and Thomas Vetter for kindly accepting to present invited papers.

Combinatorial Image Analysis Ralf Reulke, Ulrich Eckardt, Boris Flach, Uwe Knauer, Konrad Polthier, 2006-06-15 This volume constitutes the refereed proceedings of the 11th International Workshop on Combinatorial Image Analysis IWCIA 2006 held in Berlin June 2006. The book presents 34 revised full papers together with two invited papers covering topics including combinatorial
