Advances in Control Education 1997 (ACE '97) Cristina Verde, 1998 Paperback This Proceedings Volume contains the papers presented at the 4th Symposium on Advances in Control Education ACE 97 which was held in Istanbul Turkey on 14-16 July 1997 The symposium was an international forum where the recent developments and advances on control education were discussed and the experience and knowledge of new approaches in this area were disseminated Tools like mathematics software packages multimedia Internet and Tele control seem to offer many benefits from the education point of view if they are properly used There were three invited sessions on practical and theoretical aspects of control education and 59 papers from 32 countries worldwide many of them from developing countries

Advances in Control Education 2000 Ljubisa Vlačić, M. L. Brisk, 2001 Advances in Control Education 2000 saw the additional sponsorship of the Institute of Electrical and Electronic Engineers IEEE Control System Society and the Institution of Engineers Australia National Committee on Automation Control Instrumentation One hundred and three authors from 31 countries submitted their full scale manuscripts Each received at least three reviews overseen and co-ordinated by the International Program Committee members Twenty six members of the International Program Committee participated in the review process All reviews were anonymous In many cases after writing initial assessments reviewers were put in touch with the Program Committee Co-Chairman to discuss a paper further by e-mail Sixty papers were selected for full presentation Only those successfully presented at the conference are included in these proceedings Despite its small population Australia has always had a high level of international activity in control with Australian researchers contributing world leading academic work in control It has had a President of IFAC itself Professor Brian Anderson and many names are instantly recognisable at the forefront of developments in control theory It also has major industrial processes in minerals petrochemicals food and agricultural processing in manufacturing in transport and in communications that look to control for safety efficiency and reduced environmental impacts The education of engineers in the various aspects of control is thus of vital importance to Australia as it is to all developed and developing countries

On-Line Fault Detection and Supervision in the Chemical Process Industries 1998 P.S. Dhurjati, Sylvie Cauvin, 1998-10-20 The field of On-Line Fault Detection and Supervision in the Chemical Process Industries is relatively young Major activity in this area has taken place only in the last fifteen years The goals of the first workshop in Delaware were to discuss various methodologies necessary for solving industrial problems in fault diagnosis supervision and to encourage interactions between academia and industry This workshop also focused on development and evaluation of methodologies for on-line fault detection and supervision in the chemical process industries It addressed theory application validation performance and evaluation of methodologies such as parameter estimation observers parity equations signal

analysis methods classification rule based systems with probabilistic approaches fuzzy logic and neural networks There are several trends that make the topic of this workshop especially relevant in today s world The first is the tremendous advances made in automation and information technology that can potentially bring in an ever increasing amount of information on to computer screens in the operating room of a plant Avoiding problems of information overload and converting plant data to on line useful knowledge is a key challenge In some respects one can draw parallels here to biological evolution where over billions of years human beings have evolved mental models to interpret the huge amount of information received through their senses In the absence of the time advantage that evolution has had we have to rely on methodologies such as those presented in this workshop to provide assistance to operators and engineers in interpreting plant information A second trend that makes this field relevant in today s world is the increasing emphasis on environment and safety Community activism and accidents such as those in Bhopal India have caused media spotlights to be turned on the smallest of toxic releases or loss of life due to chemical accidents The negative publicity generated by such events as well as the need to maintain the image of an environmentally conscious company make industry more sensitive to the issues of early detection of faults The third trend that makes this field very relevant is that of the globalization of the world economy Increasing globalization of the chemical process industry puts pressure on economic competitiveness and higher productivity This implies reduced down time due to faults quick and flexible response of production to supply and demand changes increasing reliance on automation and reduced personnel
