

Tools for Healing

Tool	Comments
Individual Therapy	Talk therapy is a common tool throughout the healing process. Often, it may start with a higher frequency (e.g., 2x per week if in crisis) and vary in frequency thereafter. A therapist will help you determine what's going on with your well-being, equip you with tools to help manage how you feel and behave and work with you to create a plan based on your goals.
Psychiatric Hospitalization	If in a severe crisis where suicide is contemplated, it may make sense to be admitted for 24/7 psychiatric care until stabilized. You will have a team of trained professionals taking care of you 24/7 to ensure your safety until appropriate next steps are determined.
Medication	Medication may be necessary, either short-term or long-term. It's most effective when combined with other healing modalities and lifestyle changes. You may be prescribed by your primary care physician or a psychiatrist. Your therapist will refer you to another professional that specializes in medication.
Dissociatives (Ketamine)	In the past two decades, subanaesthetic doses of ketamine have been demonstrated to have rapid and sustained antidepressant effects, and accumulating research has demonstrated ketamine's therapeutic effects for various psychiatric conditions.
Support Group	A support group may be family, friends, 1-800 hotlines, or an anonymous group like a 12-step program. No pill can replace the value of direct human connection. We each need to find a tribe of people we can connect with during our healing journey for support and learning.
