Antibody Therapy:

Monoclonal Antibody Therapy of Human Cancer Kenneth A. Foon, Alton C. Morgan, 1985-09-30 KENNETH A FOON and ALTON C MORGAN JR Passive immunotherapy using heteroantisera for the treatment of cancer in animals and humans has been studied for over 50 years Attempts have been made to treat animal tumors with sera from immunized syngeneic allogeneic or xenogeneic animals A number of studies of passive immunotherapy using heterologous antisera in humans have also been performed These studies have generally been attempted in patients with large tumor burdens and as would be expected results have been transient at best A wide variety of solid tumors as well as leukemias and lymphomas have been treated with antisera raised in sheep horses rabbits and goats Problems such as anaphylaxis serum sickness and severe cytopenias have been encountered with these antisera There are a number of potential mechanisms by which unconjugated antibodies might be cytotoxic to tumor cells Antibodies bound to the cell surface membrane of tumor cells may lead to cell lysis by complement dependent or antibody dependent cellular cytotoxicity Circulating tumor cells bound by antibody may be more susceptible to phagocytosis by the reticuloendothelial system Antibody bound to the cell surface membrane of tumor cells may enhance immunogenicity of the tumor cell leading to activation of the host's immune system **Biomedical**

Research, 1995 *Therapeutic Antibodies* John Landon, Tim Chard, 2012-12-06 Several aspects of clinical medicine are poised on the edge of a new era with the introduction of therapeutic antibodies This revolution has been made possible by major advances in immune technology which are now beginning to mature into clinical practice This volume is aimed at all clinicians involved with this form of treatment especially accident and emergency physicians clinical immunologists and pharmacologists It covers both the basic technology and also all the main clinical areas of application septic shock autoimmune disease and cancer The future of therapeutic antibodies is also discussed including exciting new developments in catalytic antibodies This is the first occasion on which all these topics have been brought together in a single volume thus

making it an important reference source for physicians and researchers in this fast moving area *Monoclonal Antibody Therapy of Hematologic Malignancies* Bruce D. Cheson, 2001 *Effector functions of therapeutic antibodies* Peter Boross, Matthias Peipp, Falk Nimmerjahn, 2023-02-15 **Antibodies** A. Szentivanyi, Paul H. Maurer, Bernard W. Janicki, 2013-03-07 This publication is based on a Symposium that has been held in Clearwater Florida on February 19 21 1986 on antibodies their structure synthesis function and clinical applicability in disease Organization of this symposium by the University of South Florida College of Medicine was prompted by the unparalleled current expansion of information on these topics in general and in the field of antibody diversity in particular The issues that surround the last named dimension of this field began to surface in the late 1950 s with the first conclusive genetic studies having been answered and a new set of concepts has been defined As we see it from the material presented in this volume now new and different questions are being raised and answered by studies in progress and it may be expected that there will be other questions that will be with us for a considerably longer time We believe that the symposium brought together many prominent investigators with different backgrounds and training experiences such as immunologists microbiologists biochemists molecular biologists and clinical scientists thus providing an excellent example of the interdisciplinary value of modern immunology and modern biomedical science in general We believe therefore that bringing these complex topics to a wide audience of biomedical scientists through this symposium as well as this volume is of value to the scientific and to the medical community

Encyclopedia of Cancer Manfred Schwab, 2011-10-14 The merging of different basic and clinical science disciplines towards the common goal of fighting against cancer has long ago called for the establishment of a comprehensive reference source both as a tool to close the language gap between clinical and basic science investigators and as a platform of information for students and informed laymen alike The Encyclopedia of Cancer provides rapid access to focused information on all topics of cancer research for clinicians research scientists and advanced students Given the overwhelming success of the Second Edition which appeared in 2009 and fast recent development in the different fields of cancer research it has been decided to publish a third fully revised and expanded edition following the principal concept of the first edition that has proven so successful Recent developments are seeing a dynamic progress in basic and clinical cancer science with translational research increasingly becoming a new paradigm in cancer research In particular new approaches to both Personalized Cancer Medicine and Targeted Therapies have made promising progress While the Second Edition featured scholarly contributions from approximately 1 000 scientists clinicians in four Volumes the Third Edition includes 1 300 contributors in 7 Volumes with an A Z format of approx 7000 entries It provides definitions of common acronyms and short definitions of related terms and processes in the form of keyword entries In addition there are detailed essays which provide comprehensive information on syndromes genes and molecules and processes and methods Each essay is well structured with extensive cross referencing between all entries In the Third Edition topical Essays present a comprehensive picture of

major cancers such as Breast Cancer Colorectal Cancer Prostate Cancer Ovarian Cancer Renal Cancer Lung Cancer and Hematological Malignancies Leukemias and Lymphomas For each of these cancers different authoritative Essays are included that cover topics ranging from Pathology to Clinical Oncology and Targeted Therapies This new feature should meet the expectation that a wide community has towards a major cancer reference work The Encyclopedia of Cancer will be accessible both in print and online and this information source should be of value to both the clinical and basic scientific community as well as to the public *Cancer Treatment Reports* ,1984
