Anthropos Today Reflections On Modern Equipment In Formation:

Anthropos Today Paul Rabinow, 2009-02-09 The discipline of anthropology is at its best characterized by turbulence self examination and inventiveness In recent decades new thinking and practice within the field has certainly reflected this pattern as shown for example by numerous fruitful ventures into the politics and poetics of anthropology Surprisingly little attention however has been given to the simple insight that anthropology is composed of claims whether tacit or explicit about anthropos and about logos and the myriad ways in which these two Greek nouns have been might be and should be connected Anthropos Today represents a pathbreaking effort to fill this gap Paul Rabinow brings together years of distinguished work in this magisterial volume that seeks to reinvigorate the human sciences Specifically he assembles a set of conceptual tools modern equipment to assess how intellectual work is currently conducted and how it might change Anthropos Today crystallizes Rabinow s previous ethnographic inquiries into the production of truth about life in the world of biotechnology and genome mapping and his invention of new ways of practicing this pursuit and his findings on how new practices of life labor and language have emerged and been institutionalized Here Rabinow steps back from empirical research in order to reflect on the conceptual and ethical resources available today to conduct such inquiries Drawing richly on Foucault and many other thinkers including Weber and Dewey Rabinow concludes that a contingent practice must be developed that focuses on events of problematization Brilliantly synthesizing insights from American French and German traditions he offers a lucid deeply learned original discussion of how one might best think about anthropos today *Semiotic Ideologies* Massimo Leone, 2024-10-02 This book offers a comprehensive exploration of language and semiotic ideologies focusing on how societies construct meaning through verbal and non verbal communication It distinguishes itself by adopting a novel approach that bridges linguistics semiotics and anthropology The research dives into uncharted territory shedding light on the intricate connections between language culture and cognition offering a perspective less common in traditional linguistics or semiotics Throughout the book the reader will encounter rare illustrative examples showcasing the rich tapestry of human communication Additionally previously undisclosed historical data adds depth to the analysis providing fresh insights This work is designed for scholars seeking a deeper understanding of meaning making processes and their cultural variations It also serves as a resource for those interested in the complex interplay of language and semiotics in everyday life *Urban Fears and Global Terrors* Victor Seidler, 2007-10-18 First published in 2007 Routledge is an imprint of Taylor Francis an informa company **Morale** Daniel Ussishkin, 2017-09-15 Morale traces the emergence of a novel and modern concept through which collective conduct was be managed and its diffusion from the military to other civilian spheres of life during the twentieth century when it came to be understood as vital for the democratic management of groups in war and peace When Nature Goes Public Cori Hayden, 2020-07-21 Bioprospecting the exchange of plants for corporate promises of royalties or community development assistance has been lauded as a way to develop new medicines while

offering southern nations and indigenous communities an incentive to preserve their rich biodiversity But can pharmaceutical profits really advance conservation and indigenous rights How much should companies pay and to whom Who stands to gain and lose The first anthropological study of the practices mobilized in the name and in the shadow of bioprospecting this book takes us into the unexpected sites where Mexican scientists and American companies venture looking for medicinal plants and local knowledge Cori Hayden tracks bioprospecting's contentious new promise and the contradictory activities generated in its name Focusing on a contract involving Mexico's National Autonomous University Hayden examines the practices through which researchers plant vendors rural collectors indigenous cooperatives and other actors put prospecting to work By paying unique attention to scientific research she provides a key to understanding which people and plants are included in the promise of selling biodiversity to save it and which are not And she considers the consequences of linking scientific research and rural enfranchisement to the logics of intellectual property Roving across UN protocols botanical collecting histories Mexican nationalist agendas neoliberal property regimes and North South relations When Nature Goes Public charts the myriad emergent publics that drive and contest the global market in biodiversity and its futures

Born and Made Sarah Franklin, Celia Roberts, 2006-10-30 Are new reproductive and genetic technologies racing ahead of a society that is unable to establish limits to their use Have the new genetics outpaced our ability to control their future applications This book examines the case of preimplantation genetic diagnosis PGD the procedure used to prevent serious genetic disease by embryo selection and the so called designer baby method Using detailed empirical evidence the authors show that far from being a runaway technology the regulation of PGD over the past fifteen years provides an example of precaution and restraint as well as continual adaptation to changing social circumstances Through interviews media and policy analysis and participant observation at two PGD centers in the United Kingdom Born and Made provides an in depth sociological examination of the competing moral obligations that define the experience of PGD Among the many novel findings of this pathbreaking ethnography of reproductive biomedicine is the prominence of uncertainty and ambivalence among PGD patients and professionals a finding characteristic of the emerging biosociety in which scientific progress is inherently paradoxical and contradictory In contrast to much of the speculative futurology that defines this field Born and Made provides a timely and revealing case study of the on the ground decision making that shapes technological assistance to human heredity

Insurgent Citizenship James Holston, 2021-06-08 Insurgent citizenships have arisen in cities around the world This book examines the insurgence of democratic citizenship in the urban peripheries of São Paulo Brazil its entanglement with entrenched systems of inequality and its contradiction in violence James Holston argues that for two centuries Brazilians have practiced a type of citizenship all too common among nation states one that is universally inclusive in national membership and massively inegalitarian in distributing rights and in its legalization of social differences But since the 1970s he shows residents of Brazil's urban peripheries have formulated a new citizenship that is destabilizing the old

Their mobilizations have developed not primarily through struggles of labor but through those of the city particularly illegal residence house building and land conflict Yet precisely as Brazilians democratized urban space and achieved political democracy violence injustice and impunity increased dramatically Based on comparative ethnographic and historical research Insurgent Citizenship reveals why the insurgent and the entrenched remain dangerously conjoined as new kinds of citizens expand democracy even as new forms of violence and exclusion erode it Rather than view this paradox as evidence of democratic failure and urban chaos Insurgent Citizenship argues that contradictory realizations of citizenship characterize all democracies emerging and established Focusing on processes of city and citizen making now prevalent globally it develops new approaches for understanding the contemporary course of democratic citizenship in societies of vastly different cultures and histories

Picturing Personhood Joseph Dumit, 2021-09-14 By showing us the human brain at work PET positron emission tomography scans are subtly and sometimes not so subtly transforming how we think about our minds *Picturing Personhood* follows this remarkable and expensive technology from the laboratory into the world and back It examines how PET scans are created and how they are being called on to answer myriad questions with far reaching implications Is depression an observable brain disease Are criminals insane Do men and women think differently Is rationality a function of the brain Based on interviews media analysis and participant observation at research labs and conferences Joseph Dumit analyzes how assumptions designed into and read out of the experimental process reinforce specific notions about human nature Such assumptions can enter the process at any turn from selecting subjects and mathematical models to deciding which images to publish and how to color them Once they leave the laboratory PET scans shape social debates influence courtroom outcomes and have positive and negative consequences for people suffering mental illness Dumit follows this complex story demonstrating how brain scans as scientific objects contribute to our increasing social dependence on scientific authority The first book to examine the cultural ramifications of brain imaging technology *Picturing Personhood* is an unprecedented study that will influence both cultural studies and the growing field of science and technology studies

Everything was Forever, Until it was No More Alexei Yurchak, 2006 Drawing on diaries correspondence interviews and memoirs and applying historical anthropological and linguistic analyses this text explores late Soviet period 1960s 80s through the eyes of the last Soviet generation

The Making and Meaning of Relationships in Sri Lanka Mihirini Sirisena, 2018-03-15 This book proposes that romantic relationships filtered through various socio cultural sieves can lead to the development of affective kin bonds which underlie our sense of personhood and belonging Sirisena argues that the process resembles an attempt to make strangers into kin and that sort of affective relating is a form of self conscious relationality in which the inhabitants reflect on their individual and collective needs as well as their expectations and dreams in the future of their relationships University students romantic relationships which they gloss as serious appear to be processual and non linear and are considered to be stabilising forces which are pitched against the inherent uncertainty
