Landau, Steven P. Lewis, Heinz-Bernd Schüttler, 2012-12-06 Over fifteen years ago because of the tremendous increase in the power and utility of computer simulations The University of Georgia formed the first institutional unit devoted to the use of simulations in research and teaching The Center for Simulational Physics As the international simulations community expanded further we sensed a need for a meeting place for both experienced simulators and neophytes to discuss new techniques and recent results in an environment which promoted lively discussion As a consequence the Center for Simulational Physics established an annual workshop on Recent Developments in Computer Simulation Studies in Condensed Matter Physics This year's workshop was the fifteenth in this series and the continued interest shown by the scientific community demonstrates quite clearly the useful purpose that these meetings have served The latest workshop was held at The University of Georgia March 11-15 2002 and these proceedings provide a status report on a number of important topics This volume is published with the goal of timely dissemination of the material to a wider audience We wish to offer a special thanks to IBM Corporation and to the National Science Foundation for partial support of this year's workshop This volume contains both invited papers and contributed presentations on problems in both classical and quantum condensed matter physics We hope that each reader will benefit from specialized results as well as profit from exposure to new algorithms methods of analysis and conceptual developments Athens GA USA D P [Computer Simulations of Surfaces and Interfaces](#) Burkhard Dünweg, David P. Landau, Andrey I. Milchev, 2013-03-07 Studies of surfaces and interactions between dissimilar materials or phases are vital for modern technological applications Computer simulation methods are indispensable in such studies and this book contains a substantial body of knowledge about simulation methods as well as the theoretical background for performing computer experiments and analyzing the data The book is self contained covering a range of topics from classical statistical mechanics to a variety of simulation techniques including molecular dynamics Langevin dynamics and Monte Carlo methods A number

of physical systems are considered including fluids magnets polymers granular media and driven diffusive systems The computer simulation methods considered include both standard and accelerated versions The simulation methods are clearly related to the fundamental principles of thermodynamics and statistical mechanics **Modelling and Numerical**

Simulations II Mordechai Schlesinger, 2009-08-15 The present volume is the second in a two volume set dealing with modelling and numerical simulations in electrochemistry Emphasis is placed on the aspect of nanoelectrochemical issues It seems appropriate at this juncture to mention the n growing body of opinion in some circles that George Box was right when he stated three decades ago that All models are wrong but some are useful Actually when the statement itself was made it would have been more appropriate to say that All models are inaccurate but most are useful nonetheless At present however the statement as it was made is far more appropriate and closer to the facts than ever before Currently we are in the midst of the age of massively abundant data Today s philosophy seems to be that we do not need to know why one piece of information is better than another except through the statistics of incoming and outgoing links between information and this is good enough It is why both in principle and in practice one can translate between two languages without knowledge of either While none of this can be ignored and it may even be true that All models are wrong and increasingly you can succeed without them the traditional approach of scientific modelling is still the order of the day That approach may be stated as hypothesize measure model test It is in this light that the present volume should be viewed Parallel Problem Solving from
