

Life Cycles and Biogeography of Fish Parasites: Recent Advances and Future Directions

Recent years have seen a continued high level of interest in the life cycles of parasites, with the growth of research in aquatic systems leading the way. In particular, interest in parasites of fish parasites has grown with mounting concerns over the decline of traditional fisheries, the growth of aquaculture, the increasing concern over invasive species, and the potential of global climate change. The latter two points may also have a profound effect on the biogeography of fish parasites, and may be reflected in careful biological surveys of fishes and their parasites (Font WF, 2003, *BioScience*, 53: 1061-1067). The reason for increasing research on life cycles of fish parasites may also reflect the greater complexity of life cycles in aquatic systems relative to most terrestrial systems, especially in the case of nematodes, acanthocephalans, cestodes and trematodes. Indeed, the basic life cycles of many common parasites of fishes are still incompletely known. Future research should continue to focus on elucidating these basic cycles. However, even common fish parasites for which the basic life cycle has been known for decades require further study. For example, new information is emerging on complex developmental transformations in the life cycles of well-known strigeoid trematodes within the fish intermediate host (Goater CP *et al.* 2005, *J Parasitol*, 91: 814-821), leading to the possibility that new life-cycle stages should be recognized. Similarly, incomplete understanding of larval and juvenile stages of cestode parasites may lead to inaccurate comparison of life-cycle stages (Conn DB, 2004, In: *Proc 9th EMOP*, Monduzzi Ed, Bologna, Italy). Furthermore, these transformations may have important pathological implications for the fish host (Dezfuli BS *et al.* 2007, *Dis Aq Org*, 75: 51-59). Behavioral modification of hosts by various life-cycle stages is also a factor that is receiving considerable current attention, as are such factors as parasite resistance (Karvonen A *et al.* 2004, *Parasitology*, 129: 159-164). This review will focus on some model systems to demonstrate that the interacting complexities of fish biology, parasite life cycles, and dynamic changes in ecosystems will make future research on fish parasite life cycles and biogeography an ongoing necessity.
