

Konstantin V. Baev
Biological Neural Networks
The Hierarchical Concept of Brain Function

*B*iological Neural Networks presents a novel conceptual framework for neurobiology achieved by the application of control theory. This new paradigm provides unifying principles for understanding the functional construction of the nervous system. Konstantin Baev argues forcefully that all hierarchical levels of the nervous system are built according to the same functional principles, which are shown to underlie the highest forms of brain function. Each network hierarchy is structurally and functionally organized in such a way that a lower control system in the nervous system becomes the controlled object for a higher one, and each level of control possesses a behavioral model of its controlled object.

The book brings together for the first time the fields of neural networks (with its computational capabilities), control theory (with its hierarchical machinery), and neurobiology (with its plethora of enigmatic physiological functions, such as inborn and acquired automatic behavior). The function of the cerebellum, the limbic system, and the cortico-basal ganglia-thalamo-cortical loops are analyzed within this new hierarchical framework. Clinical applications include an original explanation of Parkinson's disease and suggested mechanisms of alleviating its symptoms by conducting neurosurgical procedures.

Baev writes with an interdisciplinary readership in mind. Neuroscientists, computer specialists and mathematicians, physicists, and clinicians devoted to deciphering the way the brain works will all find this book fascinating and stimulating reading.
