Keeping operators of the machinery and patients undergoing the procedure safe is considered the most important principle of the process by all those in the medical profession. Non-ionising technologies are generally very safe when handled by a person with the right skills. One example of this is ultrasounds, ultrasounds are used for safe diagnosis and imaging. However, ultrasounds can damage biological tissue through heating caused by the energy of the ultrasound waves. Ultrasounds can also lead to gas pockets forming in body tissue, although this is not very common. As a result, ultrasound imaging for pregnant women is shortened to minimize the amount of time the developing foetus is imaged.

Safe operating procedures (SOPs):

Safe operating procedures (SOPs) are used so that all non-ionising technologies are operated skilfully and correctly and do not pose any risks to the operator or the patient. The main basis of safe operating procedures is the same in all workplaces, but certain details might be different. The following SOPs are to be carried out by medical practitioners who work with non-ionising technologies (ultrasound, MRI, LASERs) and ensure the safety of the operator, patient, and the equipment itself.

To patient:

- *Understand the biological effects of the technique to be undertaken in terms of the potential hazards.*
- *Minimise the dosage of the technique to ensure that sufficient doses are used to determine appropriate diagnosis, imaging or treatment but are no more than is required.*

To operator:

- *Possess the relevant medical qualifications.*
- *Confirm the identity and medical details of the patient prior to the examination.*
- *Be thoroughly conversant with the operation of and operational limits of the equipment to be used.*
- *Take full responsibility of the procedure to be carried out within the local medical guidelines and practice.*
- *Identify and accept the scope of use of the procedure to be undertaken and to adhere strictly to the planned procedure.*
- *Follow or develop of formal plan or scheme of work for the procedure to be undertaken, using documented medical guidelines.*
