Hofker,Jan van Deursen,2008-02-04 Marten Hofker and Jan van Deursen have assembled a multidisciplinary collection of readily reproducible methods for working with mice and particularlyfor generating mouse models that will enable us to better understand gene function Described in step by step detail by highly experienced investigators these proven techniques include new methods for conditional induced knockout and transgenic mice as well as for working with mice in such important research areas as immunology cancer and atherosclerosis Such alternative strategies as random mutagenesis and viral gene transduction for studying gene function in the mouse are also presented

Adenovirus Methods and Protocols: Ad proteins, RNA, lifecycle, host interactions, and phylogenetics William S. M Wold,Ann E Tollefson,2007 **Clinical Bioinformatics** Ronald J.A. Trent,2007-12-18 With the ever increasing volume of information in clinical medicine researchers and health professionals need computer based storage processing and dissemination In this book leading experts in the field provide a series of articles focusing on software applications used to translate information into outcomes of clinical relevance This book is the perfect guide for researchers and clinical scientists working in this emerging omics era **Adenoviruses: Model and Vectors in Virus-Host Interactions** Walter Doerfler,Petra Böhm,2013-03-09 After three volumes on adenoviruses in 1995 the past years have seen rapid progress in the field of adenovirus research Moreover adenoviruses have attracted considerable interest as vectors in gene transfer regimens DNA Vaccines Mark W. Saltzman,Hong Shen,Janet L. Brandsma,2008-02-02 In the early 1990s almost 200 yr after Edward Jenner demonstrated the effectiveness of the smallpox vaccine a new paradigm for vaccination emerged The conventional method of vaccination required delivery of whole pathogens or structural subunits but in this new approach DNA or genetic information was administered to elicit an immunological response Once it was observed that plasmid DNA delivered in vivo led to production of an encoded transgene 1 two ground breaking studies demonstrated that immunological responses could be generated against antigenic transgenes via plasmid DNA delivered by DNA vaccination as this approach is called 2 3 The appe ance of this new vaccination strategy coincided with advances in molecular biology which provided new tools to study and manipulate the basic elements of an organism s genome and also could also be applied to the design and production of DNA vaccines DNA Vaccines is a major updated and enhancement of the first edition It reviews state of the art methods in DNA vaccine technology with chapters describing DNA vaccine design delivery systems adjuvants current appli tions methods of production and quality control Consistent with the approach of the Methods in Molecular Medicine series these chapters contain detailed practical procedures on the latest DNA vaccine technology The enthusiasm for DNA vaccine technology is made clear by the number of research studies published on this topic since the mid 1990s
