Grid Technologies M. P. Bekakos, George A. Gravvanis, Hamid Arabnia, 2006 Grid computing denotes an approach to utilize distributed resources that are not subject to centralized control This approach fulfils computing requirements arising within the context of current high performance computing applications especially in the field of computational science and engineering This idea is analogous to an electric power network grid where power generators are distributed but the users are able to access electric power without bothering about the source of energy and its location Current grid enabling technologies consist of stand alone architectures A typical architecture provides middleware access to various services at different hierarchical levels Computational grids enable the sharing selection and aggregation of a wide variety of geographically distributed computational resources such as supercomputers clusters of computers storage systems data sources instruments people etc and present them as a single unified resource for solving large scale computations and data intensive computing applications e g molecular modeling for drug design brain activity analysis high energy physics etc Grid computing is a new emerging research area aiming to promote the development and advancement of technologies that provide seamless and scalable access to wide area distributed resources

Grid Resource Management Jarek Nabrzyski, Jennifer M. Schopf, Jan Weglarz, 2012-12-06 Grid Resource Management State of the Art and Future Trends presents an overview of the state of the field and describes both the real experiences and the current research available today Grid computing is a rapidly developing and changing field involving the shared and coordinated use of dynamic multi institutional resources Grid resource management is the process of identifying requirements matching resources to applications allocating those resources and scheduling and monitoring Grid resources over time in order to run Grid applications as efficiently as possible While Grids have become almost commonplace the use of good Grid resource management tools is far from ubiquitous because of the many open issues of the field including the multiple layers of schedulers the lack of control over resources the fact that resources are shared and that users and administrators have conflicting performance goals
