Moore, 1985-10-10 This 1985 book describes research on the ecological structural physiological genetic and molecular factors that control morphogenesis in the higher fungi Both pure and applied studies of the biology of basidiomycetes are included in this volume which provides a detailed synthesis of the area by authors of the highest calibre Fungal Lipid Biochemistry Yuanda Song, 2023-07-26 Fungal Lipid Biochemistry explores the intricate biochemistry of fungal and microbial lipids The book focuses on recent advances in our knowledge about the distribution classification and biochemistry of fungal lipids The book is divided into four sections starting with an introduction to fungal lipids which includes definition classification nomenclature and some historical aspects of fungal lipid research This is followed by an overview of fungal lipids and environmental and nutritional cultural conditions affecting lipid production The second section contains four chapters that explain the metabolism of fatty acids their biosynthetic pathways together with their storage mainly in the form of triacylglycerols The latter includes a key description of the recently discovered lipid droplet acting as a highly specific cellular compartment for the storage of neutral lipids The third section contains five chapters concerned with the relatively recent interpretation of other major lipid classes which include glycerophospholipids sphingolipids aliphatic hydrocarbons sterols carotenoids and polyprenols and their occurrence and biosynthesis The final section covers lipid metabolism during fungal development and sporulation Key features Extensive coverage of fungal lipid biochemistry with a focus on recent knowledge Includes chapters for specific lipid classes with notes on their metabolism Gives knowledge about the role of lipids in fungal growth and development Provides references for further reading This book is a comprehensive reference for academics scientific researchers and industrial scientists in biotechnology food science and nutritional health who require information about fungal lipid composition and biochemistry *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1971 First multi year cumulation covers six years 1965 70 **Physiological Engineering Aspects of Penicillium Chrysogenum** Jens Nielsen, 1997 The book gives a review of penicillin production by *Penicillium chrysogenum* and also deals with a number of general aspects of fungal cultivations e g primary metabolism of filamentous fungi morphology monitoring of fungal cultivations and bioreactor performance more than 750 references The first two chapters give an introduction to the area of penicillin production with a review of the history and a survey of the present status of this industrially very important process in the first chapter In the second chapter is given an introduction to the microorganism i e its nutritional requirements its taxonomy and an overview of different strain development programmes Chapter 3 gives an introduction to the concept of Physiological Engineering This is followed by a review of various

monitoring techniques and different theoretical techniques for analysis of cultivation processes e g mathematic modeling metabolic flux analysis and metabolic control analysis Chapter 4 and 5 give a review of the metabolism with the primary metabolism being the topic of Chapter 4 and the secondary metabolism i e penicillin biosynthesis being the topic of Chapter 5 The review of the penicillin biosynthetic pathway is followed by a description of a number of results obtained using metabolic flux and metabolic control analysis Chapter 6 is devoted to the morphology of the fungus and it gives a detailed description of the growth mechanisms of filamentous fungi Chapter 7 deals with the bioreactor performance during fungal cultivations i e medium rheology gas liquid mass transfer and mixing Finally is the fed batch process applied for penicillin production described in Chapter 8 It gives an overview of the most important factors influencing penicillin production
