Abstract: Three-way fuzzy inference is the theoretical basis of three-way fuzzy control. The proposed TCRI method is based on a Mamdani three-way fuzzy implication operator and uses one inference and simple composition operation. In order to effectively improve the TCRI method, this paper proposes a full implication triple I algorithm for three-way fuzzy inference and gives the triple I solution to the TFMP problem. The emphasis of our research is R_0 and Gödel triple I solution, which is related to three-way residual implication, as well as Zadeh's and Mamdani's triple I solution, which is based on three-way fuzzy implication operator. Then the three-way fuzzy controller is constructed by the proposed Zadeh's and R_0 triple I algorithm. Finally, the proposed triple I algorithm is applied to the three-way fuzzy control system, and its advantage is illustrated by the three-dimensional surface diagram of the control variable.

Keywords: three-way fuzzy sets; three-way fuzzy inference; three-way residual implication; Triple I Algorithm; three-way fuzzy control system

1. Introduction

Artificial intelligence is a new technical science that combines knowledge representation, knowledge acquisition, knowledge inference, knowledge driving with data learning, data mining, and data driving, and uses computers to simulate certain thinking processes and intelligent behaviors of humans. Considering the uncertainty of knowledge, various mathematical theories dealing with uncertainty have become the basis and key to artificial intelligence research. As the generalization of classical set theory, probability theory [1,2], fuzzy set theory [3] and rough set theory [4] have their own strengths in dealing with uncertain problems. In recent years, various generalized fuzzy set theories based on fuzzy set theory (such as intuitionistic fuzzy set [5–7], partial fuzzy set [8,9], neutrosophic set [10–13], picture fuzzy set [14] (known as totally dependent-neutrosophic sets [15])) and three-way decision theories based on rough set theory [16–19] have developed rapidly, and they play an important role in dealing with uncertainty problems in many fields such as information science, management science, and industrial process control. It is very meaningful to organically combine these theories with different characteristics and develop them into a mathematical tool that can effectively deal with uncertain problems, such as the combination of fuzzy sets and rough sets [20–22], and the combination of evidence theory and rough sets [23–25]. In 2022, Zhang et al. first proposed the concept of three-way fuzzy sets based on the basic ideas of three-way decision, rough sets and various generalized fuzzy sets, creating a new perspective of uncertainty theory [26]. The three-way fuzzy set skillfully combines the degree idea of fuzzy sets, generalized fuzzy sets and the idea of three-way decision, which makes it more extensive in describing the uncertainty of things (such as partial mapping instead of mapping), interpretability, and usability. Recently, Zhang et al. proposed rough set models based on three-way fuzzy sets, which are used in multi-criteria decision-making [27].

Fuzzy inference based on fuzzy sets is an important branch of uncertain inference, and it is the theoretical basis of fuzzy control systems, fuzzy neural network systems,
