Abstract

Analytic-bilinear approach for construction and study of integrable hierarchies, in particular, the KP hierarchy is discussed. It is based on the generalized Hirota identity. This approach allows to represent generalized hierarchies of integrable equations in a condensed form of finite functional equations. Resolution of these functional equations leads to the r -function and addition formulae to it. General discrete transformations of the r -function are presented in the determinant form. Closed one-form and other formulae also arise naturally within the approach proposed. Generalized KP hierarchy written in terms of different invariants of Combescure symmetry transformations coincides with the usual KP hierarchy and the mKP hierarchy.

1 Introduction

The Kadomtsev-Petviashvili (KP) equation and the whole KP hierarchy of equations are significant parts of the theory of integrable equations. They arise in various fields of physics from hydrodynamics to string theory. They are also the tools to solve several problems in mathematics from the differential geometry of surfaces to an algebraic geometry.
