Anaesthesia for Neurological Surgery Peter Bartholomew McComish, Peter Owen Bodley, 1971 Clinical Anesthesia in Neurosurgery Elizabeth A. M. Frost, 2013-10-22 Clinical Anesthesia in Neurosurgery Second Edition integrates the evolution of the field of neuroanesthesia with the major areas of neurosurgical activity to give the reader the required perspective and requisite information to help in laying the foundation for future advances as well as describing the current state of the art. The book contains 25 chapters organized into five parts. Part I presents studies on cerebral physiology and evaluation. Topics covered include cerebral circulation and metabolism, intraoperative neurophysiologic monitoring and central nervous system effects of anesthetic agents. Part II covers neurosurgical and related procedures such as posterior cranial fossa surgery, surgery of the spine and peripheral nerve surgery. Part III examines central nervous system trauma including spinal cord trauma and cardiovascular effects of severe head injury. Part IV takes up postoperative and intensive care including postanesthetic care, neurosurgical intensive care and parenteral nutrition while Part V deals with the medical criteria and legal aspects of brain death.

Oxford Textbook of Neuroscience and Anaesthesiology George A. Mashour, Kristin Engelhard, 2019-01-10 The perioperative care of individuals with neurologic compromise is critically important yet it is only one dimension of the rich relationship between anaesthesiology and the neurosciences. The mechanism of everyday therapeutic interventions such as anaesthesia and analgesia is exciting neuroscience in its own right. At the new frontier of outcomes studies lies the question of how the perioperative period might impact the brain. For example, questions related to anaesthetic neurotoxicity, delirium and cognitive dysfunction pose critical challenges for the field. The Oxford Textbook in Neuroscience and Anaesthesiology addresses the exciting field of neuroanaesthesiology in a new and stimulating way. In twenty-eight chapters, the neuroscientific basis of anaesthesiology, the full spectrum of clinical neuroanaesthesia and the care of neurologic patients undergoing non-neurologic surgery are explored in one comprehensive textbook for the first time. The first section considers

the neural mechanisms of general anaesthetics cerebral physiology the neurobiology of pain and more The second section explores the care of patients with neurologic disease in the operating room or intensive care unit These clinical chapters systematically treat the perioperative considerations of both brain and spine surgery and provide introductions to neurocritical care and pediatric neuroanaesthesia The final section outlines the care of neurologic patients undergoing non neurologic surgery It examines key connections of neurology and anaesthesiology examining how conditions such as dementia stroke or epilepsy interface with the perioperative period Each chapter has been carefully crafted to be concise yet highly informative reflecting the cutting edge of neuroscience and neuroanaesthesiology This international textbook gathers the best available expertise of authors and leaders worldwide Includes access to online only content including more than 20 cases and more than 90 questions that can be used in presentations and teaching sessions By activating your unique access code you can access and use the material *Anaesthesia for Neurological Surgery* [by] P.B. Perioperative Considerations and Positioning for Neurosurgical Procedures Adam Arthur, Kevin Foley, C. Wayne Hamm, 2018-03-02 There are relationships that exist between neuroanesthesia neurosurgical procedures individual patient pathology and the positioning of a patient for said procedure A comprehensive examination of these relationships their association with patient morbidity mortality and how to approach these issues in an evidence based manner has yet to become available Positioning related injuries have been documented as major contributors to neurosurgical neuroanesthesiology liability This text examines these relationships It provides considerations necessary to the correct positioning of a patient for a neurosurgical procedure for each individual patient and their individual pathology In other words this text will demonstrate how to construct the necessary surgical posture for the indicated neurosurgical procedure given the individual constraints of the patient within the environment of anesthesia and conforming to existing evidence based practice guidelines Sections will address physiological changes inherent in positioning in relation to anesthesia for neurosurgical procedures assessment of patient for planned procedure as well as considerations for managing problems associated with these relationships Additional sections will examine the relationship between neurosurgical positioning and medical malpractice and the biomechanical science between positioning devices and neurosurgical procedures Neurosurgery and its patient population are in a constant state of change Providing the necessary considerations for the neurosurgical procedure planned under the anesthesia conditions planned in the position planned often in the absence of multicase study literary support without incurring additional morbidity is the goal of this text **Essentials of Neurosurgical Anesthesia & Critical Care** Ansgar M.
