Taber, 2007-04-13 Science is central to our modern technological society yet many of the most able pupils who could become the scientists of tomorrow turn away from science as soon as they have a choice in their studies Science is often seen to be difficult or boring and fails to engage or challenge those who are most suited to excel in scientific studies This book asks what classroom teachers can do to make sure that their science teaching is stimulating and challenging for their students Topics covered include what do we mean by gifted and able children gifted children that slip

through the net challenging science through modelling asking questions in science exploring topical issues challenging science through talk after school enrichment Set in the wider context of debates about the provision for those labelled gifted and exceptionally able this book explores the meaning of these categories and considers what they may imply in such approaches as setting streaming acceleration and enrichment

both demonstration or as student exercises The experimental method is seen as giving the student vital competence skills and experiences both at the school and at the university level This volume addresses the historical development of experiments in science education which has been largely neglected so far The contributors of Learning by Doing pay attention to various aspects ranging from economic aspects of instrument making for science teaching to the political meanings of experimental science education from the 17th to the 20th century This collected volume opens the field for further debate by emphasizing the importance of experiments for both historians of science and science educators Presentation de l'éditeur
