

on this subject. What these particular papers lack is a strong critical sense regarding the barriers to effective pollution control that have arisen in Soviet society, including such criticisms as can be found in the Soviet periodical press and the recently translated samizdat work by Boris Komarov (*The Destruction of Nature*), as well as the works of numerous Western authorities such as Goldman, Powell, Kelley, Gerner, Lundgren, Ruble, and others. Though the factual material here is interesting, these chapters seem directed largely at convincing a Western audience that all is well. They read too often like pieces from *Soviet Life* and lack even the critical bite of many articles on these topics that can be found in the Russian-language Soviet press. Our credulity is stretched particularly by the assertion of E. K. Fyedorov that "if mankind were totally embraced by the socialist social system, the social aspect of the problem of optimizing the interrelationship between man and nature would disappear." In other words, only Soviet-style systems with centrally planned economies are, in his view, able to cope effectively with environmental problems. Since 1975, he writes, when the state plan for the development of the economy first incorporated a special section on environmental protection, pollution levels in the U.S.S.R. have stabilized. It would be nice to think that this is so, but given the inability of Western experts to check on such claims a certain skepticism is in order.

In general, the writers in this volume are quite optimistic about the ability of new scientific discoveries, technological progress, and greater efficiency to solve most of the problems of resource shortages and environmental degradation. Soviet writers are consistently critical of pessimistic Western studies, such as those of the Club of Rome, and of "doomsayers" such as Garrett Hardin and Paul Ehrlich. Soviet social scientists in particular (such as the philosophers and economists represented in this volume) often remain distinctly different in mentality and approach from many of their Western counterparts: not only more optimistic about the ability of science and technology to solve the world's problems but more convinced that science can only flourish as an institution under a system of centralized planning where the emphasis is on conscious control by state organs. Certainly the enormous growth of resources and manpower devoted to science and technology in the U.S.S.R. over the past several dec-

ades reflects this belief. But one can be permitted a modicum of doubt regarding the efficacy of Soviet science, given the problems of low productivity and relative lack of creativity in many areas, problems frequently discussed in the Soviet press but never alluded to in this collection.

The Analytic Spirit. Essays in the History of Science. In Honor of Henry Guerlac. HARRY WOOLF, Ed. Cornell University Press, Ithaca, N.Y., 1981. 366 pp. \$25.

In his distinguished academic career, nearly all of which he has spent (like his father) at Cornell, Henry Guerlac has earned the unqualified respect of colleagues and students alike. Among his many achievements is a major recasting of the historiography of the chemical revolution of the 18th century; it was he who 20 years ago demonstrated the importance of the "crucial year" of 1772 in which Lavoisier turned decisively to the problems of combustion in general and of the calcination of metals in particular. Since Guerlac has always successfully married the gifts of a scholar with those of a teacher, his standards of precise yet imaginative scholarship have been passed on, year by year, to younger historians of science fortunate enough to have worked with him at Cornell. It is the high quality of this continuing tradition that makes *The Analytic Spirit* an uncommonly impressive festschrift. The work of 16 of Guerlac's former students, it is a collection imbued with a real flavor of what historians of science throughout the world will recognize as the Guerlac style.

It is no reflection on Guerlac's brilliant book-length work to suggest that he has always been preeminently the master of a different genre—the intricately argued scholarly article. He has shown time and again that the minute examination of a text need not be synonymous with pedantry. That particular lesson is implicitly repeated here by Margaret Jacob, who builds on her chance encounter with a manuscript in the British Library to illuminate a clandestine network of Continental freethinkers, the Knights of Jubilation, and thereby to raise a hornet's nest of problems concerning the relations between free thought, Protestantism, Freemasonry, and the infant En-

lightenment in the age of Bayle, Toland, and Bolingbroke. (Interested readers should refer to her recently published book, *The Radical Enlightenment*, for an extension of the argument.)

Leslie Burlingame's eye for a subject is no less keen than Jacob's. She penetrates the murky obscurity of Lamarck's chemistry, treating it refreshingly as a worthy topic in its own right and not simply as a possible explanation for the rejection of his evolutionary ideas. She traces Lamarck's eclectic Stahlianism (which involved the retention of a four-element matter theory and a resolute opposition to Lavoisier's chemistry) to the influence of the Rouelle brothers and, more originally, places it in the context of Lamarck's comprehensive hostility toward speculative system-builders in all branches of science. Burlingame makes it very plain that Lamarck's chemistry was in no sense a peripheral aberration surviving from his youth, but rather was the foundation of a unified view of nature that explained, with equal ease, the history of the earth and the origins and continuance of life. Though it has never been properly explored by historians, the point was not lost on Cuvier, who, in 1832 in his *Éloge* of Lamarck, chose to argue in detail against Lamarckian chemistry. Burlingame's paper, together with Carleton Perrin's careful study of the determined strategy of the "antiphlogistians" between 1785 and the early 1790's, serves the useful purpose of making the victory of the new chemistry appear far less inevitable than is commonly supposed. In this respect, it is particularly refreshing to see Perrin paying overdue attention to De La Méthérie's rear-guard action in favor of phlogiston, launched from a powerful base in the monthly *Journal de Physique*.

Appropriately, more than half the papers in this volume treat Guerlac's favored theme of French science in the Enlightenment. Some break new ground, like Rhoda Rappaport's immaculately researched study of the "liberties" of the Paris Academy of Sciences in the 18th century; in tracing the shifting response of academicians to the attempts by the royal bureaucracy to sway the outcome of elections and promotions, she points astutely to a growing rigidity and unimaginativeness in the acknowledged citadel of the French scientific establishment. Other papers, like Roger Hahn's caution against the lingering belief that Laplace was an atheist, take a fresh look at familiar received opinions. It is in this latter spirit that L. Pearce Williams reviews the literary and scientific evidence

The Analytic Spirit Harry Woolf,1981 Proceedings, American Philosophical Society (vol. 149, no. 2, 2005) ,

Toward a Theology of Scientific Endeavour Professor Christopher B Kaiser,2013-05-28 Foundations of science are specific conditions of the cosmos of human intelligence of cultural beliefs and of technological structures that make the pursuit of modern science possible Each of the four foundations of scientific endeavour can be studied as a topic on its own The concurrent study of all four together reveals several tensions and interconnections among them that point the way to a greater unification of faith and science This book explores four foundations of scientific endeavour and investigates some of the paradoxes each of them raises Kaiser shows that the resolution of these paradoxes inevitably leads us into theological discourse and raises new challenges for theological endeavour In order to address these challenges Kaiser draws on the wider resources of the Judeo Christian tradition and argues for a refocusing of contemporary theology from the perspective of natural science **Scrutinizing Science** A. Enlightenment Peter H. Reill,2005-06-06 This far reaching study redraws the intellectual map of the Enlightenment and boldly reassesses the legacy of that highly influential period for us today Peter Hanns Reill argues that in the middle of the eighteenth century a major shift occurred in the way Enlightenment thinkers conceived of nature that caused many of them to reject the prevailing doctrine of mechanism and turn to a vitalistic model to account for phenomena in natural history the life sciences and chemistry As he traces the ramifications of this new way of thinking through time and across disciplines Reill provocatively complicates our understanding of the way key Enlightenment thinkers viewed nature His sophisticated analysis ultimately questions postmodern narratives that have assumed a monolithic Enlightenment characterized by the dominance of instrumental reason that has led to many of the disasters of modern life Real, Mechanical, Experimental

Francesco G. Boantz,2016-05-06 The seventeenth century scientific revolution and the eighteenth century chemical revolution are rarely considered together

either in general histories of science or in more specific surveys of early modern science or chemistry This tendency arises from the long held view that the rise of modern physics and the emergence of modern chemistry comprise two distinct and unconnected episodes in the history of science Although chemistry was deeply transformed during and between both revolutions the scientific revolution is traditionally associated with the physical and mathematical sciences whereas modern chemistry is seen as the exclusive product of the chemical revolution This historiographical tension between similarity in form and disparity in historical content of the two events has tainted the way we understand the rise of modern chemistry as an integral part of the advent of modern science Against this background Matter and Method in the Long Chemical Revolution examines the role of and effects on chemistry of both revolutions in parallel using chemistry during the chemical revolution to illuminate chemistry during the scientific revolution and vice versa Focusing on the crises and conflicts of early modern chemistry and their retrospectively labeled losing parties the author traces patterns of continuity in matter theory and experimental method from Boyle to Lavoisier and reevaluates the disciplinary relationships between chemists mechanists and Newtonians in France England and Scotland Adopting a unique approach to the study of the scientific and chemical revolutions and to early modern chemical thought and practice in particular the author challenges the standard revolution centered history of early modern science and reinterprets the rise of chemistry as an independent discipline in the long eighteenth century

Recreating Newton Rebekah Higgitt, 2016-09-12 Higgitt examines Isaac Newton's changing legacy during the nineteenth century She focuses on 1820-1870 a period that saw the creation of the specialized and secularized role of the scientist At the same time researchers gained better access to Newton's archives These were used both by those who wished to undermine the traditional idealised depiction of scientific genius and those who felt obliged to defend Newtonian hagiography Higgitt shows how debates about Newton's character stimulated historical scholarship and led to the development of a new expertise in the history of science
