Analytical Economics Nicholas Georgescu-Roegen, 1966 No detailed description available for Analytical Economics

Contemporary Issues in Economics Association of University Teachers of Economics, 1975 **Energy and Economic Myths** Nicholas Georgescu-Roegen, 2014-05-18 **Energy and Economic Myths** Institutional and Analytical Economic Essays is a collection of materials that deal with various issues and concerns in economics The title aims to clarify the misconception in economics The first part of the text deals with the issues in natural resources and the economics of production Next the selection tackles the problems in institutional economics Part III covers the epistemological and methodological concerns in economics The title also talks about economic theories The book will be of great interest to economists and readers who want to enhance their understanding of economic concepts **Conflicting Philosophies and International Trade Law**

Michael Burkard, 2017-10-17 This book reveals how conflicting worldviews are at the root of public controversies on policy and trade issues It highlights the particularly controversial disputes at the level of the World Trade Organization in the case of regulating beef hormones and GMOs aiming to show how negotiators of international agreements members of dispute settlement bodies and policy makers in general could have recourse to concepts of other disciplines such as epistemology and philosophy in order to address deadlocked legal disputes Ultimately the book is a manifesto for independent and critical research *Economic Issues In Global Climate Change* John M. Reilly, 2019-04-10 This book provides a snapshot on

economic thinking about global change and provides a starting point for researchers for evaluating the economics of global change in the context of agriculture forestry and resource issues It attempts to rectify the scarcity of economic analysis in global change Project Independence Blueprint United States. Federal Energy Administration, 1974 What is Project Independence The sources and uses of energy in the United States have changed dramatically in the last several decades As a result in just one generation we have shifted from a position of domestic energy abundance to a substantial and continually growing reliance on foreign energy sources Project Independence is a wide ranging program to evaluate this growing dependence on foreign sources of energy and to develop positive programs to reduce our vulnerability to future oil cut offs and price increases *Economic Evaluation, Cost-Benefit Analysis, Economic Ethics* Felix Ekardt, 2022-06-02 With cost

benefit analysis economic sciences cultivate a specific decision making procedure which has also been partially adopted in politics Although economists do not experience the approach as normative on closer examination the approach can be identified as an economic ethics The present philosophical and at the same time transdisciplinary with special legal and economic components treatment examines the persuasive power of this approach using climate change as an example as the most important sustainability issue The objections raised against the economisation of decision making with regard to the utilitarian tradition such as the criticism of the orientation towards weighing up options the alleged lack of distributive justice or the tendency to describe people in behavioural science as selfish are hardly or not at all convincing on closer

examination In several respects however it turns out that cost benefit analysis faces insoluble problems Firstly the theoretical basis of hidden normative cost benefit analysis in philosophical empiricism does not seem tenable This means the idea of empiricism that normative questions must be transformed into questions of factual countable and reproduceable preferences of people Secondly there are massive collisions of cost benefit analysis with a liberal democratic constitutional law whose principles are universal ethical principles This concerns both freedom rights which must not depend on the ability of humans to pay and the model of democracy and respect for the rule of law Thirdly insoluble problems of application arise for cost benefit analyses which are particularly but not only apparent in the context of climate protection in general considerations as in the case of legislation as well as in individual analyses as done when constructing a coal fired power plant A strongly deflated cost benefit analysis could nevertheless contribute factual material such as partial aspects of decision consequences that can actually be depicted in monetary terms to ethical or legal decision making processes In this respect the approach appears helpful and complementary but not beyond that

Applied Economics for Development: Empirical Approaches to Selected Social and Economic Issues in Transition Economies Mahmut Zortuk, 2018-01-15 Transition economies experience transformation of their economic system Following the disintegration of the Soviet Union a number of former socialist countries underwent transitions from central planning to a market economy More generally many rapidly growing economies undergo no less profound transformations of their economic systems Contrary to common misconception the transition process cannot be simply reduced to eliminating state intervention and liberalizing the economy Economies under transition exhibit a unique set of policy challenges Unlike developed market economies missing markets or market failures abound Economic transformation takes the form of rapidly evolving patterns of international trade and investment industrial structure and consumption These changes call for appropriate public policies A continuing flow of investment hinges on suitable institutions the provision of public infrastructure and other public goods Adequate regulation can be central in ensuring that environmental resources are sustainably managed And sophisticated production systems call for corresponding social institutions in terms of education health and welfare provisions In all these cases accurate empirical assessments are central to the design of effective policy This book presents a selection of pressing economic and social issues in transition economies Selected issues include the development of particular industrial sectors the drivers and consequences of foreign direct investment public finances urbanization social indicators environmental policy and energy diversification In each case an original empirical analysis is performed using a variety of advanced quantitative methods applied to recent data The book will be of interest to economists studying transition economies economic development or having a general interest in applied economics It will be of particular interest to applied economists policy analysts and policy makers in transition economies concerned with the shape and direction of appropriate economic reforms
