Maxwell, Harold D. Delaney, 2000 Through this book's unique model comparison approach students and researchers are introduced to a set of fundamental principles for analyzing data After seeing how these principles can be applied in simple designs students are shown how these same principles also apply in more complicated designs Drs Maxwell and Delaney believe that the model comparison approach better prepares students to understand the logic behind a general strategy of data analysis appropriate for various designs and builds a stronger foundation which allows for the introduction of more complex topics omitted from other books Several learning tools further strengthen the reader's understanding flowcharts assist in choosing the most appropriate technique an equation cross referencing system aids in locating the initial detailed definition and numerous summary equation tables assist readers in understanding differences between different methods for analyzing their data examples based on actual research in a variety of behavioral sciences help students see the applications of the material numerous exercises help develop a deeper understanding of the subject Detailed solutions are provided for some of the exercises and realistic data sets allow the reader to see an analysis of data from each design in its entirety Updated throughout the second edition features significantly increased attention to measures of effects including confidence intervals strength of association and effect size estimation for complex and simple designs an increased use of statistical packages and the graphical presentation of data new chapters 15 the current controversies regarding statistical reasoning such as the latest debates on hypothesis testing ch 2 a new preview of the experimental designs covered in the book ch 2 a CD with SPSS and SAS data sets for many of the text exercises as well as tutorials reviewing basic statistics and regression and a Web site containing examples of SPSS and SAS syntax for analyzing many of the text exercises Appropriate for advanced courses on experimental design or analysis applied statistics or analysis
