Atom-field Interactions and Dressed Atoms G. Compagno,R. Passante,Franco Persico,1995 **Atom-Field Interactions and Dressed Atoms** G. Compagno,R. Passante,F. Persico,2005-09-15 The interaction between atoms and electromagnetic fields is an area of central importance to the investigation of fundamental concepts of quantum mechanics The authors provide an introduction to the theory concerning this interaction by describing the different forms of the interaction and dealing with how these interactions lead to the formation of dressed states in the presence of vacuum fluctuations as well as in the presence of external fields They also cover the role of dressed atoms in quantum measurement theory and the physical interpretation of vacuum radiative effects Treating a key field on the boundary between quantum optics and quantum electrodynamics the book will be of great use to graduate students as well as to established experimentalists and theorists in either of these areas Non-Relativistic QED Theory of the van der Waals Dispersion Interaction Akbar Salam,2016-09-29 This book provides details of the calculation of the interaction between two neutral polarizable atoms or molecules using molecular quantum electrodynamics QED To better understand the origin of this force it briefly outlines molecular QED theory the well known van der Waals dispersion potential first evaluated by Casimir and Polder who accounted for retardation effects It presents different calculation schemes for the evaluation of the dispersion potential and also discusses energy shifts involving electric quadrupole and octupole moments along with discriminatory dispersion potentials Further it explores in detail non additive dispersion interaction energies between three bodies as well as the effects of higher multipole moment correction terms and provides results for specific geometries such as collinear and equilateral triangles Lastly it computes near and far zone asymptotic limits for both pair and many body potentials with the former shown to agree with less rigorous semi classical calculations **Handbook of Nanophysics** Klaus D. Sattler,2010-09-17 Providing the framework for breakthroughs in nanotechnology this landmark publication is the first comprehensive reference to cover both fundamental and applied physics at the nanoscale After discussing the theoretical principles and measurements of nanoscale systems the organization of the set follows the historical development of nanoscience Each peer reviewed chapter presents a didactic treatment of the physics underlying the nanoscale materials applications and detailed experimental results State of the art scientific content is enriched with fundamental equations and illustrations many in color *Forces Of The Quantum Vacuum: An Introduction To Casimir Physics* Ulf Leonhardt,William M R Simpson,2015-03-27 Forces of the Quantum Vacuum presents a number of theoretical approaches to Casimir van der Waals and Casimir Polder forces that have been fruitfully employed in mainstream research and also reviews the experimental evidence for Casimir forces Beginning with basic ideas in quantum mechanics and building its way to a sophisticated form of macroscopic QED the book provides an inspiring training manual for graduate students to develop in a natural progression the ideas needed for modern theoretical research on Casimir forces **Methods in Theoretical**

Quantum Optics Stephen Barnett, Paul M. Radmore, 2002-11-14 This work presents the mathematical methods widely used by workers in the field of quantum optics. It deals with the physical assumptions which lead to the models and approximations employed but the main purpose of the text is to give a firm grounding in those techniques needed to derive analytical solutions to problems.

An Introduction to Quantum Optics and Quantum Fluctuations Peter W. Milonni, 2019-01-31 This is an introduction to the quantum theory of light and its broad implications and applications. A significant part of the book covers material with direct relevance to current basic and applied research such as quantum fluctuations and their role in laser physics and the theory of forces between macroscopic bodies. Casimir effects. The book includes numerous historical sidelights throughout and approximately seventy exercises. The book provides detailed expositions of the theory with emphasis on general physical principles. Foundational topics in classical and quantum electrodynamics are addressed in the first half of the book including the semiclassical theory of atom field interactions, the quantization of the electromagnetic field in dispersive and dissipative media, uncertainty relations and spontaneous emission. The second half begins with a chapter on the Jaynes-Cummings model, dressed states and some distinctly quantum mechanical features of atom field interactions and includes discussion of entanglement, the no-cloning theorem, von Neumann's proof concerning hidden variable theories, Bell's theorem and tests of Bell inequalities. The last two chapters focus on quantum fluctuations and fluctuation-dissipation relations beginning with Brownian motion, the Fokker-Planck equation and classical and quantum Langevin equations. Detailed calculations are presented for the laser linewidth, spontaneous emission noise, photon statistics of linear amplifiers and attenuators and other phenomena. Van der Waals interactions, Casimir forces, the Lifshitz theory of molecular forces between macroscopic media and the many-body theory of such forces based on dyadic Green functions are analyzed from the perspective of Langevin noise, vacuum field fluctuations and zero-point energy.

New Trends in Quantum Electrodynamics Roberto Passante, 2020-04-01 This book collects research and review articles covering some recent trends in nonrelativistic quantum electrodynamics, specifically the interaction of atoms or molecules within the quantum electromagnetic radiation field and the related physical effects. Specific topics covered are two- and three-body dispersion interactions between atoms and molecules both in the nonretarded van der Waals and the retarded Casimir-Polder regime, vacuum field fluctuations of the electromagnetic field and their effect in atomic systems, dispersion interactions between uniformly accelerating atoms and relation with the Fulling-Davies-Unruh effect, dynamics of atomic systems under strong electromagnetic fields, symmetries in quantum electrodynamics and open quantum systems.

Beam Shaping and Control with Nonlinear Optics F. Kajzar, R. Reinisch, 2006-04-11 The field of nonlinear optics, which has undergone a very rapid development since the discovery of lasers in the early sixties, continues to be an active and rapidly developing research area. The interest is mainly due to the potential applications of nonlinear optics directly in telecommunications for high-rate data transmission, image processing and recognition or indirectly from the possibility of obtaining large wavelength range.

tunable lasers for applications in industry medicine biology data storage and retrieval etc New phenomena and materials continue to appear regularly renewing the field This has proven to be especially true over the last five years New materials such as organics have been developed with very large second and third order nonlinear optical responses Important developments in the areas of photorefractivity all optical phenomena frequency conversion and electro optics have been observed In parallel a number of new phenomena have been reported some of them challenging the previously held concepts For example solitons based on second order nonlinearities have been observed in photorefractive materials and frequency doubling crystals destroying the perception that third order nonlinearities are required for their generation and propagation New ways of creating and manipulating nonlinear optical materials have been developed An example is the creation of highly nonlinear second order active polymers by static electric field photo assisted or all optical poling Nonlinear optics involves by definition the product of electromagnetic fields As a consequence it leads to the beam control
