

Alternating Current

Direct Current

The charged electrical particles in an alternating current start from the axis, zero, reach to the maximum positive and then come back to zero, completing one positive cycle, it further falls down below the axis, to the maximum negative and then comes back to zero, completing one negative cycle.

To represent the phase relationship between voltage and current in an AC circuit, a phasor diagram is used. a phasor diagram is a vector which rotates about the origin with angular speed Ω , ω . Magnitudes of phasors, V_0 , represents the peak value or the amplitude of voltage (V) and I_0 , represents the peak value or the amplitude of current (I)
