Alternative Energy Sources Part A Jamal Manassah, 2014-06-16 Alternative Energy Sources Part A Algae Energy Ayhan Demirbas, Muhammet Fatih Demirbas, 2010-07-10 Algae Energy covers the production of algae culture and the usage of algal biomass conversion products. It also reviews modern biomass based transportation fuels including biodiesel, bio oil, biomethane, and biohydrogen. Each chapter opens with fundamental explanations suitable for those with a general interest in algae energy and goes on to provide in depth scientific details for more expert readers. Algae energy is discussed within the wider context of green energy with chapters covering topics such as green energy facilities, algae technology, energy from algae, and biodiesel from algae. Algae Energy addresses the needs of energy researchers, chemical engineers, fuel and environmental engineers, postgraduate and advanced undergraduate students, and others interested in a practical tool for pursuing their interest in bio energy.

Biofuels Handbook James G Speight, 2015-10-09 Petroleum based fuels are well established products that have served industry and consumers for more than one hundred years. However, petroleum, once considered inexhaustible, is now being depleted at a rapid rate. As the amount of available petroleum decreases, the need for alternative technologies to produce liquid fuels that could potentially help prolong the liquid fuels culture and mitigate the forthcoming effects of the shortage of transportation fuels is being sought. The dynamics are now coming into place for the establishment of a synthetic fuels industry; the processes for recovery of raw materials and processing options have to change to increase the efficiency of oil production, and it is up to various levels of government not only to promote the establishment of such an industry but to recognise the need for available and variable technology. This timely handbook is written to assist the reader in understanding the options that are available for the production of synthetic fuel from biological sources. Each chapter contains tables of the chemical and physical properties of the fuels and fuel sources. It is essential that the properties of such materials be presented in order to assist the researcher to understand the nature of the feedstocks as well as the nature of the products. If a product cannot be employed for its hope for use, it is not a desirable product and must be changed accordingly. Such plans can only be made when the properties of the original product are understood. The fuels considered include conventional and unconventional fuel sources, the production and properties of fuels from biomass, crops, wood, domestic and industrial waste, and landfill gas.
