Automatic Speech And Speaker Recognition Advanced Topics:

Automatic Speech and Speaker Recognition Chin-Hui Lee, Frank K. Soong, Kuldeep Paliwal, 1996-03-31 Research in the field of automatic speech and speaker recognition has made a number of significant advances in the last two decades influenced by advances in signal processing algorithms architectures and hardware These advances include the adoption of a statistical pattern recognition paradigm the use of the hidden Markov modeling framework to characterize both the spectral and the temporal variations in the speech signal the use of a large set of speech utterance examples from a large population of speakers to train the hidden Markov models of some fundamental speech units the organization of speech and language knowledge sources into a structural finite state network and the use of dynamic programming based heuristic search methods to find the best word sequence in the lexical network corresponding to the spoken utterance Automatic Speech and Speaker Recognition Advanced Topics groups together in a single volume a number of important topics on speech and speaker recognition topics which are of fundamental importance but not yet covered in detail in existing textbooks Although no explicit partition is given the book is divided into five parts Chapters 1 2 are devoted to technology overviews Chapters 3 12 discuss acoustic modeling of fundamental speech units and lexical modeling of words and pronunciations Chapters 13 15 address the issues related to flexibility and robustness Chapter 16 18 concern the theoretical and practical issues of search Chapters 19 20 give two examples of algorithm and implementational aspects for recognition system realization Audience A reference book for speech researchers and graduate students interested in pursuing potential research on the topic May also be used as a text for advanced courses on the subject

Advanced Concepts in Adaptive Signal Processing W. Kenneth Jenkins, Andrew W. Hull, Jeffrey C. Strait, Bernard A. Schnaufer, Xiaohui Li, 2012-12-06 Although adaptive filtering and adaptive array processing began with research and development efforts in the late 1950 s and early 1960 s it was not until the publication of the pioneering books by Honig and Messerschmitt in 1984 and Widrow and Stearns in 1985 that the field of adaptive signal processing began to emerge as a distinct discipline in its own right Since 1984 many new books have been published on adaptive signal processing which serve to define what we will refer to throughout this book as conventional adaptive signal processing These books deal primarily with basic architectures and algorithms for adaptive filtering and adaptive array processing with many of them emphasizing practical applications Most of the existing textbooks on adaptive signal processing focus on finite impulse response FIR filter structures that are trained with strategies based on steepest descent optimization or more precisely the least mean square LMS approximation to steepest descent While literally hundreds of archival research papers have been published that deal with more advanced adaptive filtering concepts none of the current books attempt to treat these advanced concepts in a unified framework The goal of this new book is to present a number of important but not so well known topics that currently exist scattered in the research literature The book also documents some new results that have been conceived and developed through research conducted at the University of

Illinois during the past five years *Automatic Speech et speaker recognition* ,1979 *Advanced Signal Processing for Communication Systems* Tadeusz Wysocki,Michael Darnell,Bahram Honary,2006-04-18 *Advanced Signal Processing for Communication Systems* consists of 20 contributions from researchers and experts The first group of chapters deals with the audio and video processing for communications applications including topics ranging from multimedia content delivery over the Internet through the speech processing and recognition to recognition of non speech sounds that can be attributed to the surrounding environment The book also includes sections on applications of error control coding information theory and digital signal processing for communication systems like modulation software defined radio and channel estimation *Advanced Signal Processing for Communication Systems* is written for researchers working on communication systems and signal processing as well as telecommunications industry professionals **Advanced Topics in Biometrics** Haizhou Li,Liyuan Li,Kar-Ann Toh,2014-05-14 *Biometrics* is the study of methods for uniquely recognizing humans based on one or more intrinsic physical or behavioral traits After decades of research activities biometrics as a recognized scientific discipline has advanced considerably both in practical technology and theoretical discovery to meet the increasing need of biometric deployments In this book the editors provide both a concise and accessible introduction to the field as well as a detailed coverage on the unique research problems with their solutions in a wide spectrum of biometrics research ranging from voice face fingerprint iris handwriting human behavior to multimodal biometrics The contributions also present the pioneering efforts and state of the art results with special focus on practical issues concerning system development This book is a valuable reference for established researchers and it also gives an excellent introduction for beginners to understand the challenges , **Advances in Biometrics** N. K. Ratha,Venu Govindaraju,2008 Recent advances in biometrics include new developments in sensors modalities and algorithms As new sensors are designed newer challenges emerge in the algorithms for accurate recognition Written for researchers advanced students and practitioners to use as a handbook this volume captures the very latest state of the art research contributions from leading international researchers It offers coverage of the entire gamut of topics in the field including sensors data acquisition pattern matching algorithms and issues that impact at the system level such as standards security networks and databases **Advanced Low-Power Digital Circuit Techniques** Muhammad S. Elrabaa,Issam S. Abu-Khater,Mohamed I. Elmasry,2012-10-28 *Advanced Low Power Digital Circuit Techniques* presents several novel high performance digital circuit designs that emphasize low power and low voltage operation These circuits represent a wide range of circuits that are used in state of the art VLSI systems and hence serve as good examples for low power design Each chapter contains a brief introduction that serves as a quick background and gives the motivation behind the design Each chapter also ends with a summary that briefly explains the contributions contained therein This makes the book very readable The reader can skim through the chapters very quickly to get a feel for the design problems presented in the book and the solutions proposed by the authors Examples of circuits used in systems

where low power is important from reliability and portability points of view such as general purpose and DSP processors are presented in Chapters 2 3 and 4 Chapters 5 and 7 give examples of circuits used in systems where reliability and more system integration are the main driving forces behind lowering the power consumption Chapter 6 gives an example of a general purpose high performance low power circuit design Advanced Low Power Digital Circuit Techniques is a real designer's book It investigates alternative circuit styles as well as architectural alternatives and gives quantitative results for comparison in realistic technologies Several of the circuits presented have been fabricated so that simulations can be checked The circuits covered are the most important building blocks for many designs so the text will be of direct use to designers MOS designs are covered as well as BiCMOS and there are several novel circuits

Text, Speech and Dialogue Vaclav Matousek, Paul Mautner, Roman Moucek, Karel Tauser, 2003-06-30 This book constitutes the refereed proceedings of the 4th International Conference on Text Speech and Dialogue TSD 2001 held in Zelezná Ruda Czech Republic in September 2001 The 59 revised papers presented were carefully reviewed and selected from 117 submissions The book presents a wealth of state of the art research and development results from the field of natural language processing with emphasis on text speech and spoken language
