Handbook of Methods in Cultural Anthropology H. Russell Bernard,Clarence C. Gravlee,2014-07-08 The Handbook of

Methods in Cultural Anthropology now in its second edition maintains a strong benchmark for understanding the scope of contemporary anthropological field methods. Avoiding divisive debates over science and humanism, the contributors draw upon both traditions to explore fieldwork in practice. The second edition also reflects major developments of the past decade, including the rising prominence of mixed methods, the emergence of new technologies, and evolving views on ethnographic writing. Spanning the chain of research from designing a project through methods of data collection and interpretive analysis, the Handbook features new chapters on ethnography of online communities, social survey research, and network and geospatial analysis. Considered discussion of ethics, epistemology, and the presentation of research results to diverse audiences round out the volume. The result is an essential guide for all scholars, professionals, and advanced students who employ fieldwork.

Combinatorial Optimization and Applications Zaixin Lu, Donghyun Kim, Weili Wu, Wei Li, Ding-Zhu Du, 2015-12-08. This book constitutes the refereed proceedings of the 9th International Conference on Combinatorial Optimization and Applications COCOA 2015 held in Houston, TX, USA, in December 2015. The 59 full papers included in the book were carefully reviewed and selected from 125 submissions. Topics covered include classic combinatorial optimization, geometric optimization, network optimization, applied optimization, complexity, and game and optimization in graphs.

Handbook of combinatorial optimization Dingzhu Du, Panos M. Pardalos, 1998-12-15. This is the second of a multi-volume set. The various volumes deal with several algorithmic approaches for discrete problems as well as with many combinatorial problems. The emphasis is on late 1990s developments. Each chapter is essentially expository in nature but scholarly in its treatment.

Measurement, Judgment, and Decision Making Michael H. Birnbaum, 1997-11-27. Measurement, Judgment, and Decision Making provides an excellent introduction to measurement, which is one of the most basic issues of the science of psychology and the key to science. Written by leading researchers, the book covers measurement, psychophysical scaling, multidimensional scaling, stimulus categorization, and behavioral decision making. Each chapter provides a useful handbook summary and unlocks the door for a scholar who desires entry to that field. Any psychologist who manipulates an independent variable that affects a psychological construct or who uses a numerical dependent variable to measure a psychological construct will want to study this book. Written by leading researchers in fields of measurement, psychophysical scaling, multidimensional scaling, stimulus categorization, and behavioral decision making. Provides basic definitions and summaries of theories. Presents summaries and citations to relevant literature. Contains new developments, current controversies, and open questions. Explains relationships among fields and historical links.

Handbook of Combinatorial Optimization Ding-Zhu Du, Panos M. Pardalos, 2013-12-01. Combinatorial or discrete optimization is one of the most active fields in the interface of operations research, computer science, and applied mathematics. Combinatorial optimization problems arise in various applications, including communications, network design, VLSI design, machine vision, air line crew scheduling, corporate planning, computer-aided design, and manufacturing, database query design, cellular telephone frequency assignment.

constraint directed reasoning and computational biology Furthermore combinatorial optimization problems occur in many diverse areas such as linear and integer programming graph theory artificial intelligence and number theory All these problems when formulated mathematically as the minimization or maximization of a certain function defined on some domain have a commonality of discreteness Historically combinatorial optimization starts with linear programming Linear programming has an entire range of important applications including production planning and distribution personnel assignment finance allocation of economic resources circuit simulation and control systems Leonid Kantorovich and Tjalling Koopmans received the Nobel Prize 1975 for their work on the optimal allocation of resources Two important discoveries the ellipsoid method 1979 and interior point approaches 1984 both provide polynomial time algorithms for linear programming These algorithms have had a profound effect in combinatorial optimization Many polynomial time solvable combinatorial optimization problems are special cases of linear programming e g matching and maximum flow In addition linear programming relaxations are often the basis for many approximation algorithms for solving NP hard problems e g dualheuristics

Clustering And Classification Phipps Arabie, Larry Hubert, Geert De Soete, 1996-01-29 At a moderately advanced level this book seeks to cover the areas of clustering and related methods of data analysis where major advances are being made Topics include hierarchical clustering variable selection and weighting additive trees and other network models relevance of neural network models to clustering the role of computational complexity in cluster analysis latent class approaches to cluster analysis theory and method with applications of a hierarchical classes model in psychology and psychopathology combinatorial data analysis clusterwise aggregation of relations review of the Japanese language results on clustering review of the Russian language results on clustering and multidimensional scaling practical advances and significance tests

Stein's Method and Applications A. D. Barbour, Louis Hsiao Yun Chen, 2005 Stein's startling technique for deriving probability approximations first appeared about 30 years ago Since then much has been done to refine and develop the method but it is still a highly active field of research with many outstanding problems both theoretical and in applications This volume the proceedings of a workshop held in honour of Charles Stein in Singapore August 1983 contains contributions from many of the mathematicians at the forefront of this effort It provides a cross section of the work currently being undertaken with many pointers to future directions The papers in the collection include applications to the study of random binary search trees Brownian motion on manifolds Monte Carlo integration Edgeworth expansions regenerative phenomena the geometry of random point sets and random matrices
