Building Profits In The Construction Industry:

Building Profits in the Construction Industry Michael T. Kubal, Kevin Miller, Ronald D. Worth, 1999-01-01 CD ROM contains Over 1000 Web links Marketing plans Press releases Marketing materials from around the nation Property Companies and the Construction Industry in Britain Hedley Smyth, 1985-09-12 This book was the first detailed and systematic account of the property and construction sectors of the British economy Developing out of a materialist theoretical perspective Dr Smyth provides an alternative explanation of the different characteristics of the two sectors and rejects traditional notions of the backwardness of the construction sector The specific historical experience of the Second World War and the rebuilding it necessitated provides the basis of this analysis and it is argued that the particular divergencies of the construction sector stem from periods of wider economic crisis Similar periods of crisis have shaped the property sector which dependent upon the complex relationship between ground rent the value of the building and building rent cannot be understood in terms of urban rent Property companies and the construction industry in Britain challenges both established and radical thinking and its historical account of the development management and production of the built environment in the years since 1939 addresses some of the central concerns of human geography today **A Strategic Approach to the UK Construction Industry** Stephen Gruneberg, 2018-12-07 The construction industry is a microcosm of the economy as a whole and as such the economics of the sector contains many of the aspects of the economy in general albeit with fascinating and unique features What are the implications of economic theory for the future of UK construction How does the industry ensure innovation quality and efficiency What priorities might best serve the construction industry those working in it and their customers In seeking answers to these and other questions the UK government has commissioned a number of reports on the construction industry including the Latham and Egan reports and more recently Construction 2025 These have invariably proposed time and cost targets for the construction industry In this new book Stephen Gruneberg stands in stark contrast to those reports and presents the relevant theoretical aspects of construction economics to account for the behaviour of construction firms and suggest a strategy for future growth and sustainability He discusses the theory and data relating to the output of firms in relation to the type of firm the market and how these firms behave as a result The purpose of this book is to advocate the measures needed to create the kind of industry that must be fostered to ensure the quality of its output sustainability and the fair terms and conditions of employment for its workforce Gruneberg s new book is essential reading for anyone wishing to understand the economic forces that determine industry outcomes and who has a stake in the success of the UK construction sector **Applying a Systems Thinking Approach to the Construction Industry** Michael Siebert, 2023-10-19 This book aims to shed light on why it is that so many well meaning initiatives and government white papers have failed to have the expected impact in transforming the UK construction industry Using the UK housing sector as a case study Mike Siebert applies a Systems Thinking approach to tackling some of the shared Wicked Problems

faced by an industry that urgently needs to boost its productivity levels build more sustainably and affordably and generally improve its working practices In an accessible and easy to read style Siebert challenges the overall decision making and problem solving approach adopted by the industry and seeks to put Systems Thinking front and centre to consider the core issues from multiple perspectives Initially outlining the key stakeholders and the drivers and barriers to change he then introduces Systems Thinking and explains using numerous examples of known issues what this approach could achieve His central aim is to show how if a Systems Thinking approach were to be applied to the UK housing industry s problems many of them could be resolved to the benefit of all the parties involved government housebuilders material suppliers the warranty industry the design industry and the end users These are shared problems and they require shared solutions but without first understanding these complex problems from the perspectives of all parties that need to benefit from the solutions being proposed it is unlikely that those solutions will achieve the level of engagement needed for them to successfully meet their objectives

Social Enterprise in the Construction Industry Martin Loosemore,Dave Higgon,2015-08-27 Through the emerging lens of social enterprise this book examines how the global construction industry can engage more effectively with the communities in which it builds addressing disadvantage and environmental degradation to leave a positive legacy for future generations Combining insights from leading research and real life case studies of social enterprise in the construction sector the result is a practical framework which will help social enterprises clients consultants and construction firms work collectively to build a thriving social enterprise sector Readers of this timely book will learn to embrace social enterprise and an important new sector in the global construction industry They will learn to see community involvement as an opportunity rather than a risk and fully understand the broader role they can play in building a fairer and more sustainable society
