## **Building Interactive Systems Architectures And Tools:**

**Building Interactive Systems** Philip Gray,Roger Took,2013-03-09 Architectures and tools are two important considerations in the construction of interactive computer systems The former is concerned with the optimal structural organisation of systems and the latter with the effective support of the design and management of user interfaces They are regarded as the areas of research most likely to contribute to the development of existing interactive systems in particular by providing improved architectures capable of supporting new styles of interaction and more sophisticated software tools to improve productivity This volume combines the proceedings of two workshops held in York and Glasgow which concentrated on architectures and tools respectively In doing so it addresses the problems of user interface construction from two complementary viewpoints and provides alternative perspectives on many of the central issues Some of the papers are published in expanded form to provide a more comprehensive coverage of the topics and two additional papers have been included which offer a useful insight into issues raised by the workshops The papers address formal and theoretical concerns as well as academic and commercial ones Specific topics covered include novel input models architectures for real time systems and object oriented user interface tools for X widgets NeWS and Smalltalk based applications The papers also include presentations of new tools and architectural designs Building Interactive Systems Architectures and Tools provides the most extensive recent account of research into the relationship between architectures and tools in the construction of interactive computer systems and will be of interest to researchers postgraduate students and software developers

*Engineering Interactive Systems* Jan Gulliksen, Morten Borup Harning, Philippe Palanque, Gerrit C. van der Veer, Janet Wesson, 2008-12-18 Engineering Interactive Systems 2007 is an IFIP working conference that brings together researchers and practitioners interested in strengthening the scientific foundations of user interface design examining the relationship between software engineering SE and human computer interaction HCI and on how user centered design UCD could be strengthened as an essential part of the software engineering process Engineering Interactive Systems 2007 was created by merging three conferences HCSE 2007 Human Centered Software Engineering held for the first time The HCSE Working Conference is a multidisciplinary conference entirely dedicated to advancing the basic science and theory of human centered software systems engineering It is organized by IFIP WG 13.2 on Methodologies for User Centered Systems Design EHCI 2007 Engineering Human Computer Interaction was held for the tenth time EHCI aims to investigate the nature concepts and construction of user interfaces for software systems It is organized by IFIP WG 13.4.2.7 on User Interface Engineering DSV IS 2007 Design Specification and Verification of Interactive Systems was held for the 13th time DSV IS provides a forum where researchers working on model based techniques and tools for the design and development of interactive systems can come together with practitioners and with those working on HCI models and theories

**Design, Specification and Verification of Interactive Systems '95** Philippe Palanque, Remi Bastide, 2012-12-06 This book is the final outcome of the Eurographics Workshop on Design Specification and Verification of Interactive Systems that was held in Bonas from June 7 to 9 1995 This workshop was the second of its kind following the successful first edition in Italy in 1994 The goal of this ongoing series of meetings is to review the state of the art in the domain of tools notations and methodologies supporting the design of Interactive Systems This acknowledges the fact that making systems that are friendlier to the user makes the task ever harder to the designers of such systems and that much research is still needed to provide the appropriate conceptual and practical tools The workshop was located in the Chateau de Bonas in the distant countryside of Toulouse France This location has been selected to preserve the quiet and studious atmosphere that was established in the monastery of Santa Croce at Bocca di Magra for the first edition and that was much enjoyed by the participants The conversations initiated during the sessions often lasted till late at night in the peaceful atmosphere of the Gers landscape

Interactive Systems: Design, Specification, and Verification Fabio Paterno, 2012-12-06 Making systems easier to use implies increasingly complex management of communication between users and applications An increasing part of the application program is devoted to the user interface In order to manage this complexity it is very important to have tools notations and methodologies that support the designer's work during the refinement process from specification to implementation The purpose of this proceedings of the first 1994 Eurographics workshop on this area is to review the state of the art It compares the different existing approaches in order to identify the principal requirements and the most suitable notations and methods and

indicates the relevant results ALPUK92 Krysia Broda,2012-12-06 Since its conception nearly 20 years ago logic programming has been developed to the point where it now plays an important role in areas such as database theory artificial intelligence and software engineering There are however still many outstanding research issues which need to be addressed and the UK branch of the Association for Logic Programming was set up to provide a forum where the flourishing research community could discuss important issues which were often by passed at the larger international conferences This volume contains the invited papers refereed papers and tutorials presented at the 4th ALPUK Conference which aimed to broaden the frontiers of logic programming by encouraging interaction between it and other related disciplines The papers cover a variety of technical areas including concurrent logic languages and their semantics applications of logic languages to other non classical logical systems modules types and error handling and the distributed execution of Prolog programs The wide scope of the papers refelects the breadth of interest in this important area of computer science ALPUK 92 provides a comprehensive overview of current progress being made in logic programming research It will be of interest to all workers in the field especially researchers postgraduate students and research and development workers in industry *Design, Specification and Verification of Interactive Systems '97* Michael D. Harrison,Juan C. Torres,2012-12-06 An increasing recognition of the role of the human system interface is leading to new extensions and styles of specification Techniques are being developed that facilitate the expression of user oriented requirements and the refinement and checking of specifications of interactive systems This book reflects the state of the art in this important area and also contains a summary of working group discussions about how the various techniques represented might be applied to a common case study

*Interfaces to Database Systems (IDS92)* Richard Cooper,2012-12-06 Despite the volume of research carried out into the design of database systems and the design of user interfaces there is little cross fertilization between the two areas The control of user interfaces to database systems is therefore significantly less advanced than other aspects of DBMS design As database functionality is used in a wider range of areas such as design applications the suitability of the user interface is becoming increasingly important It is therefore necessary to begin applying the knowledge developed by HCI researchers to the specialised domain of database systems This volume contains revised papers from the International Workshop on Interfaces to Database Systems held in Glasgow 1 3 July 1992 The workshop aimed to develop an interaction between the design of database systems and user interfaces It discussed both the production of interfaces tailored to particular applications and also more general systems within which interfaces can be developed Some of the papers concentrate on usability aspects some discuss different interface metaphors whilst others tackle the question of designing a general conceptual model The latter topic is of particular importance as it is only by achieving an abstract model of what the user understands to be in the database that the data can be associated with appropriate interface facilities Among the contents of the volume are integrated interfaces to publicly available databases database query interface for medical information

systems an integrated approach to task oriented database retrieval interfaces GRADI a graphical database interface for a multimedia DBMS cognitive view mechanism for multimedia information systems a graphical schema representation for object oriented databases a conceptual framework for error analysis in SQL interfaces a browser for a version entity relationship database Interfaces to Database Systems IDS92 is unique in that it brings together a variety of approaches from the database and HCI research communities It will provide essential reading for researchers of database systems and also industrial developers of DBMS

**First International Workshop on Larch** Ursula Martin, Jeannette M. Wing, 2013-11-11  
The papers in this volume were presented at the First International Workshop on Larch held at MIT Endicott House near Boston on 13-15 July 1992 Larch is a family of formal specification languages and tools and this workshop was a forum for those who have designed the Larch languages built tool support for them particularly the Larch Prover and used them to specify and reason about software and hardware systems The Larch Project started in 1980 led by John Guttag at MIT and James Horning then at Xerox Palo Alto Research Center and now at Digital Equipment Corporation Systems Research Center DEC SRC Major applications have included VLSI circuit synthesis medical device communications compiler development and concurrent systems based on Lamport's TLA as well as several applications to classical theorem proving and algebraic specification Larch supports a two tiered approach to specifying software and hardware modules One tier of a specification is written in the Larch Shared Language LSL An LSL specification describes mathematical abstractions such as sets relations and algebras its semantics is defined in terms of first order theories The second tier is written in a Larch interface language one designed for a specific programming language An interface specification describes the effects of individual modules e.g. state changes resource allocation and exceptions its semantics is defined in terms of first order predicates over two states where state is defined in terms of the programming language's notion of state Thus LSL is programming language independent a Larch interface language is programming language dependent

**Formal Methods in Databases and Software Engineering** V.S. Alagar, Laks V.S. Lakshmanan, F. Sadri, 2012-12-06  
Logic and object orientation have come to be recognized as being among the most powerful paradigms for modeling information systems The term information systems is used here in a very general context to denote database systems software development systems knowledge base systems proof support systems distributed systems and reactive systems One of the most vigorously researched topics common to all information systems is formal modeling An elegant high level abstraction applicable to both application domain and system domain concepts will always lead to a system design from outside in that is the aggregation of ideas is around real life objects about which the system is to be designed Formal methods when applied with this view in mind especially during early stages of system development can lead to a formal reasoning on the intended properties thus revealing system flaws that might otherwise be discovered much later Logic in different styles and semantics is being used to model databases and their transactions it is also used to specify concurrent distributed real time and reactive systems The notion of object is central to

the modeling of object oriented databases as well as object oriented design and programs in software engineering Both database and software engineering communities have undoubtedly made important contributions to formalisms based on logic and objects It is worthwhile bringing together the ideas developed by the two communities in isolation and focusing on integrating their common strengths
