Bone Morphogenetic Proteins:

Bone Morphogenetic Proteins Slobodan Vukicevic, Kuber T. Sampath, 2012-11-28 From the basic science to potential and approved clinical applications the most recent data in the rapidly growing field of bone morphogenetic proteins BMPs are summarized in this topical volume Distinguished scientists present reviews on a range of scientific topics including biochemistry biology molecular biology and preclinical animal studies on spinal fusion cartilage repair craniofacial and dental reconstruction using BMPs as well as approved clinical applications in human bone non unions This book provides a resource not only for experts in the field but also for undergraduate students newcomers and clinicians worldwide given that the use of BMPs in orthopedic reconstruction has been already approved in Europe Australia Canada and the USA Bone Morphogenetic Proteins: From Local to Systemic Therapeutics Slobodan Vukicevic, Kuber T. Sampath, 2008-08-15 Tissue engineering is gaining interest as it is applied for regeneration of organs to attain their lost function Although resorbable scaffolds and progenitor cell types are required principles to engineer a functional tissue locally the inductive signal is a prerequisite to trigger the growth and differentiation of responding cells in space and time Bone morphogenetic proteins BMPs also called growth and differentiation factors GDFs originally identified from bone have been successfully used to regenerate the bone in humans Most recent preclinical data suggests that BMPs have a potential to provide protection against inflammation and fibrosis in acute and chronic injury of parenchymal tissues when applied systemically to sustain the function of kidney and liver The application of BMPs from a local to systemic utility is a rapidly growing field gaining interest among researchers and biotech entrepreneurs In this volume we summarize the advances made on the local and systemic use of BMPs including chapters covering the regulation of BMP signalling pathways biological actions of BMPs in bone cartilage and teeth as well as clinical applications and potential systemic use of BMPs for tissues beyond bone This volume is of interest to researchers from immunology cell biology biochemistry and clinicians from orthopedics and dentistry as well as to research managers from biotech and pharmaceutical companies Bone Morphogenetic Proteins: Regeneration of Bone and Beyond Slobodan Vukicevic, Kuber T. Sampath, 2012-11-28 Since the discovery of the bone morphogenetic proteins BMPs more than 15 years ago there has been an unpredicted explosion of both basic scientific discoveries and clinical reports on their use from institutions all over the world The potent efficacy of BMPs in almost all crucial developmental events as well as during regeneration of various organs such as bone kidney brain liver heart etc has positioned BMPs at the center of scientific interest Many of these aspects are covered in this new PIR volume Their role in development biology signal transduction kidney regeneration ENS functions craniofacial skeleton reconstruction joint and cartilage repair long bone non unions and acute fractures and spinal fusion is reviewed by experts in the field For the first time the role of BMPs in carcinogenesis has been reviewed to provide a rationale for applying their biology in patients with bone tumors The optimism resulting from safe and successful treatment with BMPs for various skeletal malformations of more than 10 000 patients

worldwide has opened new avenues for exploring other indications for their use The next big challenge for bringing BMPs to the benefit of mankind is in regenerating articular cartilage defects and rescuing patients with acute and chronic renal failure The volume editors thank all authors for the rapid preparation of their chapters in order that the book remains up to date for readers with specific interest in the field of regenerative medicine The important contribution of Mrs Morana and Mr

spinal surgery and long bone trauma surgery ,2013 Bone morphogenetic proteins BMPs are a group of growth factors capable of inducing the formation of bone In addition to other vital tissue development functions these proteins signal new bone growth through multiple pathways during the healing of bone Osteoblasts are one cell type that respond to BMP signaling and are directly responsible for deposition of new bone BMPs induce the differentiation of osteoprogenitor cells into osteoblasts and stimulate migration of these cells to areas of repair leading to the formation of new bone Formation of new bone is critical for surgical success in spinal fusion surgeries and in the treatment of nonunion of fractured limbs In order to achieve sufficient production of new bone for these procedures a bone graft can be used to induce new bone formation More recently application of recombinant human BMPs has been an available alternative or adjunct to bone graft procedures in order to achieve sufficient new bone formation As with many growth factors disruption of normal BMP signaling is routinely found in tumour cells Therefore at therapeutic doses the potential of exogenous BMPs to increase cancer incidence is a logical concern Additional potential adverse events specific to these biotherapeutics must also be evaluated before their use is considered in any application The purpose of this report is to retrieve and review the existing evidence on clinical effectiveness and safety of BMPs for use in spinal fusion surgery and treatment of long bone trauma
