Topology And Physics Chen Ning Yang,Mo-lin Ge,Yang-hui He,2019-01-09 The book is an engaging and influential collection of significant contributions from an assembly of world expert leaders and pioneers from different fields working at the interface between topology and physics or applications of topology to physical systems The book explores many interesting and novel topics that lie at the intersection between gravity quantum fields condensed matter physical cosmology and topology A rich well organized and comprehensive overview of remarkable and insightful connections between physics and topology is here made available to the physics reader Contemporary Physics Since its birth in Poincar s seminal 1894 Analysis Situs topology has become a cornerstone of mathematics As with all beautiful mathematical concepts topology inevitably resonating with that Wignerian principle of the effectiveness of mathematics in the natural sciences finds its prominent role in physics From Chern Simons theory to topological quantum field theory from knot invariants to Calabi Yau compactification in string theory from spacetime topology in cosmology to the recent Nobel Prize winning work on topological insulators the interactions between topology and physics have been a triumph over the past few decades In this eponymous volume we are honoured to have contributions from an assembly of grand masters of the field guiding us with their world renowned expertise on the subject of the interplay between Topology and Physics Beginning with a preface by

Chen Ning Yang on his recollections of the early days we proceed to a novel view of nuclei from the perspective of complex geometry by Sir Michael Atiyah and Nick Manton followed by an entr e toward recent developments in two dimensional gravity and intersection theory on the moduli space of Riemann surfaces by Robbert Dijkgraaf and Edward Witten a study of Majorana fermions and relations to the Braid group by Louis H Kauffman a pioneering investigation on arithmetic gauge theory by Minhyong Kim an anecdote enriched review of singularity theorems in black hole physics by Sir Roger Penrose an adventure beyond anyons by Zhenghan Wang an aper u on topological insulators from first principle calculations by Haijun Zhang and Shou Cheng Zhang finishing with synopsis on quantum information theory as one of the four revolutions in physics and the second quantum revolution by Xiao Gang Wen We hope that this book will serve to inspire the research community

Minkowski Spacetime: A Hundred Years Later Vesselin Petkov, 2010-03-11 Celebrating the one hundredth anniversary of the 1909 publication of Minkowski s seminal paper Space and Time this volume includes a fresh translation as well as the original in German and a number of contributed papers on the still controversial subject

The Non-Fundamentality of Spacetime Kian Salimkhani, 2023-10-06 This book argues that our current best theories of fundamental physics are best interpreted as positing spacetime as non fundamental It is written in accessible language and largely avoids mathematical technicalities by instead focusing on the key metaphysical and foundational lessons for the fundamentality of spacetime According to orthodoxy spacetime and spatiotemporal properties are regarded as fundamental structures of our world Spacetime fundamentalism however faces challenges from speculative theories of quantum gravity roughly speaking the project of applying the lessons of quantum mechanics to gravitation and spacetime This book demonstrates that the non fundamentality of spacetime does not rely on speculative physics alone Rather one can give an interpretation of general relativity that supports some form of spacetime non fundamentalism The author makes the case for spacetime non fundamentalism in three steps First he confronts the standard geometrical interpretation of general relativity with Brown and Pooley s dynamical approach to relativity theory Second he considers an alternative derivation of the Einstein field equations namely the classical spin 2 approach and argues that it paves the way for a refined dynamical approach to general relativity Finally he argues that particle physics can serve as a continuity condition for the metaphysics of spacetime The Non Fundamentality of Spacetime will be of interest to scholars and advanced students working in philosophy of physics philosophy of science and metaphysics

The Deep Metaphysics of Space Edward Slowik, 2016-10-12 This volume explores the inadequacies of the two standard conceptions of space or spacetime substantivalism and relationism and in the process proposes a new historical interpretation of these physical theories This book also examines and develops alternative ontological conceptions of space and explores additional historical elements of seventeenth century theories and other metaphysical themes The author first discusses the two main opposing theories of the ontology of space One known as substantivalism proposes space to be an entity that can exist independently of material things The other

relationism contends that space is a relation among material things Readers will learn about specific problems with this dichotomy First Newton and Leibniz are often upheld as the retrospective forerunners of substantivalism and relationism But their work often contradicts the central tenets of these views Second these theories have proven problematic when transferred to a modern setting especially with regards to general relativity and the recent quantum gravity hypotheses The author details an alternative set of concepts that address these problems The author also develops a new classificational system that provides a more accurate taxonomy for the elements of all spatial ontologies This classification obtains successful analogies between Newton Leibniz and other natural philosophers with contemporary physical theories Classical and Quantum Aspects of Gravity in Relation to the Emergent Paradigm Sumanta Chakraborty, 2017-08-01 This thesis explores the connection between gravity and thermodynamics and provides a unification scheme that opens up new directions of exploration Further elaborating on the Hawking effect and the possibility of singularity avoidance the author not only discusses the information loss paradox at a broader level but also provides a possible solution to it As the final frontier it describes some novel effects arising from the microscopic structure of spacetime Taken as a whole the thesis addresses three major research areas in gravitational physics it starts with classical gravity proceeds to the black hole information loss paradox and closes with Planck scale physics The thesis is written in a lucid and pedagogical style with an introduction accessible to researchers from other branches of physics and a discussion presenting open questions and future directions which will benefit and hopefully inspire next generation researchers **Space, Time, and Spacetime** Vesselin Petkov, 2010-09-02 Dedicated to the centennial anniversary of Minkowski's discovery of spacetime this volume contains papers most presented at the Third International Conference on the Nature and Ontology of Spacetime that address some of the deepest questions in physics
