

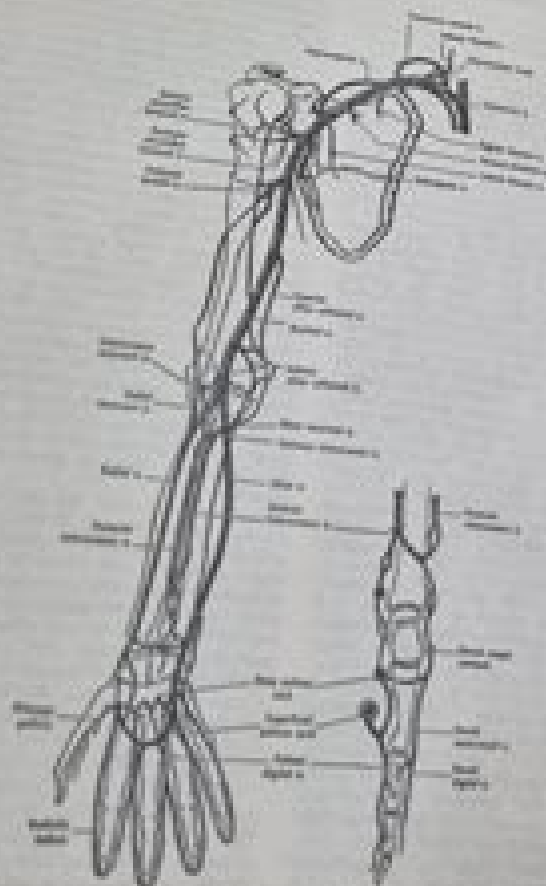

Fig. 17-4. The nerves of the upper limb. The digital nerves (lower right) are found in the hand.

Fig. 17-5. Diagrams of the nerve supply of the upper limb. These diagrams do not show the distribution of the nerves to the muscles and skin of the hand. The nerves shown are the principal branches of the brachial plexus.

Here, there is loss of extension at the wrist-supraplantar points and required flexion movements, but no wrist drop. Whether or not extension is weakened depends on the level of the lesion. If the lesion is in the radial nerve, it includes the supinator branch of the radial nerve, there may be a patch of sensory loss on the dorsum of the hand.

If the posterior interosseous nerve is sectioned after it leaves the supinator, only thumb movements will be impaired (abduction, extension, opposition). The effect on the index finger of the loss of action of the extensor indicis may not be great.

Radial nerve fibers regenerate well, perhaps better than those of any other nerve.

Musculospiral Nerve (Fig. 17-5). A terminal branch (C5, 6, 7) of the lateral cord, it pierces the coracobrachialis and descends between the biceps and brachialis. It supplies these three muscles, gives off twigs to the elbow joint, and continues as the lateral ant. brachial cutaneous nerve.
