

Ecological Factors

- Populations are dependant on ecological factors
- We have 2 types of ecological factors
 1. Abiotic: Non- living factors (physical or chemical) that affect the environment that a species chooses
 2. Biotic: Living factors that affect the environment that a species chooses

Model Systems in Behavioral Ecology Lee Alan Dugatkin, 2019-12-31

A key way that behavioral ecologists develop general theories of animal behavior is by studying one species or a closely related group of species model systems over a long period. This book brings together some of the field's most respected researchers to describe why they chose their systems, how they integrate theoretical, conceptual, and empirical work, lessons for the practice of the discipline, and potential avenues of future research. Their model systems encompass a wide range of animals and behavioral issues, from dung flies to sticklebacks, dolphins to African wild dogs, from foraging to aggression, territoriality to reproductive suppression. *Model Systems in Behavioral Ecology* offers an unprecedented systems focus and revealing insights into the confluence of personal curiosity and scientific inquiry. It will be an invaluable text for behavioral ecology courses and a helpful overview and a preview of coming developments for advanced researchers. The twenty-five chapters are divided into four sections: insects and arachnids, amphibians and reptiles, birds, and mammals. In addition to the editor, the contributors include Geoff A. Parker, Thomas D. Seeley, Naomi Pierce, Kern Reeve, Gerald S. Wilkinson, Bert H. Ildobler, and Flavio Roces. George W. Uetz, Michael J. Ryan, and Gil Rosenthal, Judy Stamps, H. Carl Gerhardt, Barry Sinervo, Robert Warner, Manfred Milinski, David F. Westneat, Alan C. Kamil, and Alan B. Bond, Paul Sherman, Jerram L. Brown, Anders Pape Møller, Marc Bekoff, Richard C. Connor, Joan B. Silk, Christopher Boesch, Scott Creel, A. H. Harcourt, and Tim Caro, and M. J. Kelly.

Evolutionary Behavioral Ecology David Westneat, Charles W. Fox, 2010-04. *Evolutionary Behavioral Ecology* presents a comprehensive treatment of the evolutionary and ecological processes shaping behavior across a wide array of organisms and a diverse set of behaviors and is suitable as a graduate-level text and as a sourcebook for professional scientists.

Carnivore Behavior, Ecology, and Evolution John L. Gittleman, 2019-05-15. The mammalian order Carnivora is characterized by an incredible range of morphological, ecological, and behavioral variation. Carnivores can be as small as the 100 gram least weasel or as large as the 800 kilogram polar bear. Their reproductive rate can vary from one offspring every five years, as with some black bears, to three litters a year, as with the dwarf mongoose. Group sizes can be traced along a wide continuum from the solitary ermine to the monogamous golden jackal to the large extended packs of as many as 80 spotted hyenas. Until recently, the general habits of most wild carnivore species were inadequately understood. In the last decade, however, improved technologies including the use of radiotelemetry and night vision scopes have led to many important discoveries. This book is at once a critical summary and an evaluation of current research on carnivores. A worthy successor to R. F. Ewer's monumental volume *The Carnivores*, Cornell University Press, it is the work of 30 leading carnivore biologists who here assemble comparative data on the basic anatomical, behavioral, ecological, physiological, reproductive, and evolutionary characteristics of this group. After a general introduction to the Carnivora, the volume is divided in three parts, each of which begins with a brief introduction outlining its main themes.

Part I Behavior covers acoustic and olfactory communication behavioral development behavioral ecology of canids and hyaenids modes of solitary living and group living In Part II Ecology topics include feeding ecology of the giant panda and Asiatic black bear adaptations for aquatic living ecological constraints on predation in felids consequences of small size in mustelids rate of basal metabolism and food habits and reproductive output Part III Evolution deals with the morphological approaches to phylogeny and the fossil record An appendix presents a complete classification of the Carnivora including topics of continuing controversy Highlighting recent developments in the study of the Carnivora and areas for further research this broad synthesis will be of great value of students and researchers in animal behavior behavioral ecology wildlife ecology mammalogy paleontology systematics and evolution theory It will also encourage realistic conservation programs to manage rapidly diminishing populations and will elucidate particular features of the carnivores for nonspecialist readers

Behavioral Ecology and Conservation Biology Timothy M. Caro, 1998-08-27 Behavioural ecologists study how animals maximize their genetic representation whilst conservation biologists study small populations attempt to prevent species extinctions This volume attempts to link these disciplines formally

The Behavioral Ecology of the Tibetan Macaque Jin-Hua Li, Lixing Sun, Peter M. Kappeler, 2019-11-18 This open access book summarizes the multi disciplinary results of one of China's main primatological research projects on the endemic Tibetan macaque *Macaca thibetana* which had continued for over 30 years but which had never been reported on systematically Dedicated to this exceptional Old World monkey this book makes the work of Chinese primatologists on the social behavior cooperation culture cognition group dynamics and emerging technologies in primate research accessible to the international scientific community One of the most impressive Asian monkeys and the largest member of its genus the Tibetan macaque deserves to be better known This volume goes a long way towards bringing this species into the spotlight with many excellent behavioral analyses from the field Frans de Waal Professor of Psychology Emory University USA Macaques matter To understand primate patterns and trends and to gain important insight into humanity we need to augment and expand our engagement with the most successful and widespread primate genus aside from *Homo* This volume focuses on the Tibetan macaque a fascinating species with much to tell us about social behavior physiology complexity and the macaque knack for interfacing with humans This book is doubly important for primatology in that beyond containing core information on this macaque species it also reflects an effective integrated collaboration between Chinese scholars and a range of international colleagues exactly the type of collaborative engagement primatology needs This volume is a critical contribution to a global primatology Agust n Fuentes Professor of Anthropology University of Notre Dame USA I have many fond memories of my association with Mt Huangshan research beginning in 1983 when together with Professor Qishan Wang we established this site It is such a beautiful place and I miss it It is gratifying to see how far research has progressed since we began work there becoming more internationalized and very much a collaborative endeavor under the long term direction of Professor Jin Hua Li and

colleagues This book highlights the increased interest in this species representing a variety of disciplines ranging from macro aspects of behavior cognition and sociality to micro aspects of microbes parasites and disease authored by a group of renowned Chinese and international primatologists I applaud their efforts and expect more interesting work to come from this site in the years ahead Kazuo Wada Professor Emeritus Kyoto University Japan Behavioral Ecology of Tropical Animals Regina H. Macedo, 2010-11-15 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume makes another important contribution to the development of the field by bringing together material that aggregates studies conducted on the behavior of tropical animals Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onward Ethology and Behavioral Ecology of Odontocetes Bernd Würsig, 2019-08-02 This book concentrates on the marine mammalian group of Odontocetes the toothed whales dolphins and porpoises In 23 chapters a total of 40 authors describe general patterns of ethological concepts of odontocetes in their natural environments with a strong bent towards behavioral ecology Examples are given of particularly well studied species and species groups for which enough data exist especially from the past 15 years The aim is to give a modern flavor of present knowledge of ethology and behavior of generally large brained behaviorally flexible mammals that have evolved quite separately from social mammals on land As well the plight of populations and species due to humans is described in multiple chapters with the goal that an understanding of behavior can help to solve or alleviate at least some human made problems *Behavioral Mechanisms in Ecology* Douglass H. Morse, 1980 This readable text represents a much needed synthesis of ecological insight into animal behavior The field of behavioral ecology is relatively new having evolved from a combination of classical ethology as developed by Lorenz and Tinbergen and population ecology Now for the first time a single author integrates the vast literature on animal ecology and behavior into a conceptual whole Exploring the theme of resource acquisitions Douglass H Morse combines the comparative approach to biology with models based on evolutionary theory Secondary consequences of sexual selection and other selective pressures are considered in detail Discussion of interspecific interactions and constraints is especially rich as is the treatment of foraging theory kinship theory habitat selection and predator avoidance Perhaps the book s greatest achievement however is its unparalleled ecological and evolutionary analysis of individual differences Behavioral Mechanisms in Ecology will meet the teaching and reference needs of an extremely broad audience of professional biologists
