Behavioral Variation Case Study Of A Malagasy Lemur The Primates:

Behavioral Variation Alison F. Richard, 1978 Behavioral Variation is the most thorough field research to date on the lemurs of Madagascar Dr Richard's investigation ranges from a history of the subject to a description of the diverse Malagasy climate and vegetation to population dynamics activity patterns and social behavior to group social life behavioral variability and a general review of ecology and social organization among primates

New Directions in Lemur Studies Berthe Rakotosamimanana, Hanta Rasamimanana, J. Ganzhorn, Steven M. Goodman, 2012-12-06 Over the course of the past decade there has been an enormous augmentation in the amount of information available on the lemurs of Madagascar These advances are closely coupled with an increase in the number of national and international researchers working on these animals As a result Madagascar has emerged as one of the principal sites of primatological studies in the world Furthermore the conservation community has a massive interest in the preservation of the natural habitats of the island and lemurs serve as one of the symbols of this cause Between 10 and 14 August 1998 the XVIIth International Primatology Society IPS Congress was held in Antananarivo Madagascar For a country that about a decade ago was largely closed to foreign visitors this Congress constituted a massive event for the Malagasy scientific community and was assisted by about 550 primatologists from 35 different countries Naturally given the venue and context of the Congress many of the presentations dealt with lemurs and covered a very wide breadth of subjects

Lemur Social Systems and Their Ecological Basis J.

Ganzhorn, P.M. Kappeler, 2013-06-29 The past decade has seen a steady increase in studies of lemur behavior and ecology As a result there is much novel information on newly studied populations and even newly discovered species that has not yet been published or summarized In fact lemurs have not been the focus of an international symposium since the Prosimian Biology Conference in London in 1972 Moreover research on lemurs has reached a new quality by addressing general issues in behavioral ecology and evolutionary biology Although lemurs provide important comparative information on these topics this aspect of research on lemurs has not been reviewed and compared with similar studies in other primate radiations Thus as did many in the field we felt that the time was ripe to review and synthesize our knowledge of lemur behavioral ecology Following an initiative by Gerry Doyle we organized a symposium at the XIVth Congress of the International Primatological Society in Strasbourg France where 15 contributions summarized much new information on lemur social systems and their ecological basis This volume provides a collection of the papers presented at the Strasbourg symposium plus two reports from recently completed field projects Each chapter was peer reviewed typically by one lemurologist and one other biologist The first three chapters present novel information from the first long term field studies of three enigmatic species Sterling describes the social organization of *Daubentonia madagascariensis* showing that aye aye ranging patterns deviate from those of all other nocturnal primates

Reconstructing Behavior in the Primate Fossil Record J. Michael Plavcan, Richard F. Kay, William L. Jungers, Carel P. van Schaik, 2012-12-06 This volume brings together a series of papers that address the topic

of reconstructing behavior in the primate fossil record The literature devoted to reconstructing behavior in extinct species is overwhelming and very diverse Sometimes it seems as though behavioral reconstruction is done as an afterthought in the discussion section of papers relegated to the status of informed speculation But recent years have seen an explosion in studies of adaptation functional anatomy comparative sociobiology and development Powerful new comparative methods are now available on the internet At the same time we face a rapidly growing fossil record that offers more and more information on the morphology and paleoenvironments of extinct species Consequently inferences of behavior in extinct species have become better grounded in comparative studies of living species and are becoming increasingly rigorous We offer here a series of papers that review broad issues related to reconstructing various aspects of behavior from very different types of evidence We hope that in so doing the reader will gain a perspective on the various types of evidence that can be brought to bear on reconstructing behavior the strengths and weaknesses of different approaches and perhaps new approaches to the topic We define behavior as broadly as we can including life history traits locomotion diet and social behavior giving the authors considerable freedom in choosing what exactly they wish to explore

beautifully illustrated exploration of our fascination with our closest primate relatives and the development of primatology as a discipline This insightful work is a compact but wide ranging survey of humankind s relationship to the great apes chimpanzees bonobos gorillas orangutans from antiquity to the present Replete with fascinating historical details and anecdotes it traces twists and turns in our construction of primate knowledge over five hundred years Chris Herzfeld outlines the development of primatology and its key players and events including well known long term field studies notably the pioneering work by women such as Jane Goodall Dian Fossey and Birut Galdikas Herzfeld seeks to heighten our understanding of great apes and the many ways they are like us The reader will encounter apes living in human families painting apes apes who use American Sign Language and chimpanzees who travelled in space A philosopher and historian specializing in primatology Herzfeld offers thought provoking insights about our perceptions of apes as well as the boundary between human and ape and what it means to be either

Long-Term Field Studies of Primates Peter M. Kappeler, David P. Watts, 2012-01-06 Some primate field studies have been on going for decades covering significant portions of individual life cycles or even multiple generations In this volume leading field workers report on the history and infrastructure of their projects in Madagascar Africa Asia and South America More importantly they provide summaries of their long term research efforts on primate behaviour ecology and life history highlighting insights that were only possible because of the long term nature of the study The chapters of this volume collectively outline the many scientific reasons for studying primate behaviour ecology and demography over multiple generations This kind of research is typically necessitated by the relatively slow life histories of primates Moreover a complete understanding of social organization and behaviour factors often influenced by rare but important events requires long term data collection Finally long term field projects are also becoming increasingly important foci of local conservation activities

Clutton-Brock, 2012-12-02 Primate Ecology Studies of Feeding and Ranging Behavior in Femurs Monkeys and Apes describes the behavioral aspects of ecology including activity patterning food selection and ranging behavior The book is composed of 19 chapters 17 of which are concerned with the ecology or behavior of particular social groups of primates arranged in the taxonomic order of the species concerned The final two chapters review some of the generalizations emerging from comparison of inter and intraspecific differences in feeding and ranging behavior The book aims to suggest areas of particular interest where research can be usefully developed
