Setliff,Rob A. Rutenbar,2012-12-06 This book and the research it describes resulted from a simple observation we made sometime in 1986 Put simply we noticed that many VLSI design tools looked alike That is at least at the overall software architecture level the algorithms and data structures required to solve problem X looked much like those required to solve problem X Unfortunately this resemblance is often of little help in actually writing the software for problem X given the software for problem X In the VLSI CAD world technology changes rapidly enough that design software must continually strive to keep up And of course VLSI design software and engineering design software in general is often exquisitely sensitive to some aspects of the domain technology in which it operates Modest changes in functionality have an unfortunate tendency to require substantial and time consuming internal software modifications Now observing that large engineering software systems are technology dependent is not particularly clever However we believe that our approach to xiv Preface dealing with this problem took an interesting new direction We chose to investigate the extent to which automatic programming ideas could be used to synthesize such software systems from high level specifications This book is one of the results of that effort *Data Structures, Algorithms, and Program Style Using C* James F.
