Brain And Psyche The Biology Of The Unconscious:

Brain and Psyche Jonathan Winson, 1986 Psyche and Brain Fred M. Levin, 2018-05-08 This book contains essential data necessary to develop both a learning theory and a theory of therapeutic change for psychoanalysis It approaches how the mind brain deals with the acquisition transfer modification and utilization of information **The ^ATwenty-four Hour Mind** Rosalind D. Cartwright, 2010-06-24 In The Twenty four Hour Mind sleep researcher Rosalind Cartwright brings together decades of research into the bizarre sleep disorders known as parasomnias to propose a new theory of how the human brain works consistently throughout waking and sleeping hours based upon research showing that one of the primary purposes of sleep is to aid in regulating emotions and processing experiences that occur during waking hours Affect Regulation and the Origin of the Self Allan N. Schore, 2015-11-19 For over three decades Allan N Schore has authored numerous volumes chapters and articles on regulation theory a biopsychosocial model of the development psychopathogenesis and treatment of the implicit subjective self The theory is grounded in the integration of psychology psychiatry and neuroscience and it is now being used by both clinicians to update psychotherapeutic models and by researchers to generate research First published in 1994 this pioneering volume represented the inaugural expression of his interdisciplinary model and has since been hailed by a number of scientific and clinical disciplines as a groundbreaking and paradigm shifting work This volume appeared at a time when the problem of emotion ignored for most of the last century was finally beginning to be addressed by science including the emergent field of affective neuroscience After a century of the dominance of the verbal left brain it presented a detailed characterization of the early developing right brain and its unique social emotional and survival functions not only in infancy but across all later stages of the human life span It also offered a scientifically testable and clinically relevant model of the development of the human unconscious mind Affect Regulation and the Origin of the Self acts as a keystone and foundation for all of Schore's later writings as every subsequent book article and chapter that followed represented expansions of this seminal work Instinct and Revelation Alondra Oubre, 2013-10-11 Instinct and Revelation revolves around the hypothesis that ritual behavior and imaginative awareness in early hominids may have helped to spawn the evolution of the human brain and human consciousness Using an integral perspective comparable with systems theory the book carefully interweaves fact and theory from physical and cultural anthropology psychobiology and the brain sciences psychology and to a lesser degree eastern philosophy This book breaks from tradition by discussing from a primarily anthropological perspective the origin of human consciousness within a philosophical framework that embraces precepts from human evolution evolutionary psychology the neurosciences biocultural anthropology and cultural symbolic anthropology **What is the New Age?** William P. Frost, 1992 This study offers information about the claims and beliefs of the New Age as well as background to the physical biological neurophysiological cultural anthropological psychological and quantum theoretical facts that are part of discussions of this form of holistic spirituality

Parapsychology David Groome, Ron Roberts, 2014-08-13 This intriguing new book presents an exploration of the unconventional side of psychology parapsychology Assuming no prior knowledge of psychology Roberts explores a wide array of unusual phenomena dream telepathy near death experiences alien abductions astrology the placebo effect and awareness during anesthesia and in comas addressing the myths surrounding paranormal experience and placing them within the context of scientific study **Placing Blame** Michael S. Moore, 2010 This is a collection of essays written by Moore which form a thorough examination of the theory of criminal responsibility The author covers a wide range of topics giving the book a coherence and unity which is rare in assembled essays Perhaps the most significant feature of this book is Moore's espousal of a retributivist theory of punishment This anti utilitarian standpoint is a common thread throughout the book It is also a trend which is currently manifesting itself in all areas of moral political and legal philosophy but Moore is one of the first to apply such attitudes so systematically to criminal law theory As such this innovative new book will be of great interest to all scholars in this field Theories of Personality Jess Feist, 1990 **The New York Times Book Review**, 1985 Presents extended reviews of noteworthy books short reviews essays and articles on topics and trends in publishing literature culture and the arts Includes lists of best sellers hardcover and paperback
