Hudson Herrick, 1965 [Brain of the Tiger Salamander](#) Charles J. Herrick,

The Central Nervous System of Vertebrates Rudolf Nieuwenhuys, Hans J. ten Donkelaar, Charles Nicholson, 2014-11-14 This comprehensive reference is clearly destined to become the definitive anatomical basis for all neuroscience research The book provides a complete overview and comparison of the structural organization of all vertebrate groups ranging from amphioxus and lamprey through fishes amphibians and birds to mammals The large specialised section of the work devoted to the CNS of the various vertebrate groups is preceded by introductory chapters on neurons cell masses fibre tracts morphogenesis methodology and techniques Although focusing on structure the authors provide functional correlations throughout This monumental work is and will remain unique the only source of such brilliant illustrations at both the macroscopic and microscopic levels [Evolution of The Brain and Intelligence](#) Harry Jerison, 2012-12-02 Evolution of the Brain and Intelligence covers the general principles of behavior and brain function The book is divided into four parts encompassing 17 chapters that emphasize the implications of the history of the brain for the evolution of behavior in vertebrates The introductory chapter covers the studies of animal behavior and their implications about the nature of the animal's world The following chapters emphasize methodological issues and the meanings of brain indices and brain size as well as the general anatomy of the brain Other chapters discuss the history of the brain in the major vertebrate groups that were known about 300 million years ago to determine the fate of these early vertebrate groups Discussions on broad trends in evolution and their implications for the evolution of intelligence are also included Substantive matter on the brain's bodies and associated mechanisms of behavior of vertebrates are covered in the remaining chapters of the book with an emphasis on evolution above the species level This book is of value to anthropologists behavioral scientists zoologists paleontologists

and neurosciences students Neuroanatomy of the Zebrafish Brain Mario F. Wulliman, Barbara Rupp, Heinrich Reichert, 2012-12-06 Visual Behavior in Salamanders Gerhard Roth, 2012-12-06 Salamanders are subject to misconceptions even among vertebrate zoologists and physiologists They are often said to exist only in northern temperate zones being bound to aquatic or very moist cool habitats In reality more than half of all salamander species live in subtropical and tropical zones exclusively in the New World Again more than half of the salamander species have become totally independent of aquatic habitats following the loss of a free larval stage Many of the subtropical and tropical salamanders have become adapted to rather high temperatures up to 26-28 °C The brain and the sensory systems of salamanders are often considered to be primitive and their behavior is thought to be simple and uninfluenced by learning However careful studies show that the salamander brain possesses virtually all the anatomical and functional properties found in anurans which are usually regarded as being much more evolved with respect to the guidance of comparable behavior Most of the salamander species not only possess a highly efficient visual system which is the topic of the present work but can orient themselves almost as effectively by means of olfaction vibration sense and electroreception Furthermore it has recently been shown that at least part of their behavior especially that concerned with feeding and prey preferences is strongly influenced by individual experience **Brains Through Time** Georg F. Striedter, R. Glenn Northcutt, 2020 This book encourages readers to view similarities and differences in various species as fundamental to a comprehensive understanding of nervous systems
