difficulties associated with comparing data obtained by means of different experimental methods of uncertain comparability at different sites at different times and because of difficulties in taking into account the influence of neutralizing substances on the data (Hanson and Hidy 1982, Stensland and Semonin 1982). A long-term (18-year) record of reasonably reliable data on deposition chemistry is available at only one site in North America (see Chapter 4).

The relationship between emissions and deposition in North America is complicated by changes that are not reflected in data on aggregate emissions. For example,

Acid Deposition National Research Council Staff, *Acid Deposition* Committee on Atmospheric Transport and Chemical Transformation in Acid Precipitation, Environmental Studies Board, Commission on Physical Sciences, Mathematics, and Applications, Division on Engineering and Physical Sciences, National Research Council, 1983-01-15 How damaging is acid rain Current opinions differ widely in part because for every proposed link between acid rain and adverse environmental effects an alternative explanation based on other phenomena can be or has been proposed and in many cases cannot be readily dismissed The specific areas addressed in this volume include the emissions of sulfur and nitrogen oxides precipitation chemistry atmospheric sulfates and visibility surface water chemistry sediment chemistry and abundance of diatom taxa fish populations and forest productivity The book then draws conclusions about the acid deposition phenomenon relationship identifying phenomena which are directly acid deposition caused and suggesting others apparently caused by human activities unrelated to acid deposition Acid Deposition ,1986 *Acid Deposition* Committee on Atmospheric Transport and Chemical Transformation in Acid Precipitation,1983 Acid deposition ,1983 The U.S. National Acid Precipitation Assessment Program ,1991 **Acid Rain Control** United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Health and the Environment,1984 **Chemistry of Multiphase Atmospheric Systems** Wolfgang Jaeschke,2013-06-29 Rapidly increasing interest in the problems of air pollution and source receptor relationships has led to a significant expansion of knowledge in the field of atmospheric chemistry In general the chemistry of atmospheric trace constituents is governed by the oxygen content of the atmosphere Upon entering the atmosphere in a more or less reduced state trace substances are oxidized via various pathways and the generated products are often precursors of acidic compounds Beside oxidation processes occurring in the gas phase gaseous compounds are often converted into solid aerosol particles The various steps within gas to particle conversion are constantly interacting with condensation processes which are caused by the tropospheric water content Thus in addition to the gaseous state a liquid and solid state exists within the troposphere The solid phase consists of atmospheric conversion products or fly ash and mineral dust The liquid phase consists of water conversion products and soluble compounds The chemistry occurring within this system is often referred to as hydrogenous chemistry The chemist interprets this term however more strictly as reactions which occur only at an interphase between phases This however is not always what happens in the atmosphere There are indeed heterogeneous processes such as reactions occurring on the surface of dry aerosol particles But apart from these we must focus as well on reactions in the homogeneous phase which are single steps of consecutive reactions running through various phases **National Acid Precipitation Assessment Program** ,1990 **Acid Rain and Transported Air Pollutants** ,1984
