Biogeochemical Monitoring in Small Catchments Jirí Cerný, Martin Novák, Tomás Paces, R. Kelman Wieder, 2012-12-06 This Special Issue of Water Air and Soil Pollution offers original contributions from BIOGEOMON an international symposium on ecosystem behavior and the evaluation of integrated monitoring of small catchments held in Prague Czech Republic in September 1993 The meeting attracted nearly 200 scientists from 27 countries on five continents BIOGEOMON was a loose continuation of another international meeting GEOMON which was held in Prague in 1987 Both symposia provided a forum for the discussion of ideas on environmental problems in western and eastern Europe with important contributions from the American continent With the dramatic collapse of the iron curtain it was our hope that more so than GEOMON BIOGEOMON would provide opportunities for the free exchange of ideas fostering the development of research collaborations between its participants With international openness comes the increasing realization that every

industrialized nation has its own legacy of environmental degradation Anthropogenic impacts differ in severity and scale air and water transport of pollutants transform local impacts into regional and global ones ignoring political boundaries and economic differences Environmental consequences of anthropogenic activities often are detectable at the ecosystem level Thus the challenge of ecosystem science and to the individuals who practice it is to develop a comprehensive understanding of ecosystem function in the past and at present and to apply such understanding toward minimizing future insults to the local regional and global environment
