## Across Wide Fields:

*Instrument Handbook for the Wide Field and Planetary Camera* Richard Griffiths, 1985      *Astronomy from Wide-Field Imaging* H.T. MacGillivray, E.B. Thomson, Barry M. Lasker, I. Neill Reid, David F. Malin, Richard M. West, Hilmar Lorenz, 2012-12-06 H T MacGILLIVRAY Royal Observatory Blackford Hill Edinburgh EH9 3HJ Scotland U K IAU Symposium No 161 on Astronomy from Wide Field Imaging held in Potsdam Germany during 23-27th August 1993 was the first conference organised by the recently formed Working Group of IAU Commission 9 on Wide Field Imaging This Working Group was instigated during the XXIst meeting of the General Assembly of the International Astronomical Union in Buenos Aires in 1991 and represented a merging of the former formal IAU Working Group on Astronomical Photography and the informal Digitised Optical Sky Surveys Working Group Dr Richard West was invited to be Chairperson and hence was given the daunting task of organising the Group from scratch The very fact that the first conference after only two years was a major IAU Symposium says much about the determination and enthusiasm of Richard West to fulfilling the aims of the new Working Group The siting of the conference in Potsdam in formerly East Germany provided an excellent opportunity to advantage from the political changes in Eastern Europe Good access to the meeting was possible by scientists from Eastern European countries allowing exchange of information on the very important Wide Field facilities in both East and West information on the rich archives of photographic plates that exist in both East and West and allowing discussions between scientists facing very similar problems in both East and West      *Atlas of Wide-field-of-view Outgoing Longwave Radiation Derived from Nimbus 7 Earth Radiation Budget Data Set--November 1985 to October 1987* Thomas Dale Bess, 1991

*Wide-Field Spectroscopy* E. Kontizas, M. Kontizas, D.H. Morgan, G.P. Vettolani, 2012-12-06 E KONTIZAS Astronomical Institute National Observatory of Athens P O Box 20048 Athens GR 11810 GREECE The international conference on Wide Field Spectroscopy and its subject matter were agreed during the general assembly of the International Astronomical Union IAU in August 1994 by the Working Group of Commission 9 Wide Field Imaging This meeting gave an opportunity to world experts on this subject to gather in Athens in order to discuss the current exploitation and the impending opportunities that exist in the area of multi object spectroscopy with particular emphasis on 1 Astronomical instruments data acquisition processing and analysis techniques 2 Astrophysical problems best tackled through wide field multi object spectroscopy The new fibre optic technology offers an important tool for the advancement of basic research and the development of industrial applications Astronomical spectroscopy is a field of astronomy which has contributed much to the advancement of fundamental physics The spectra of hot stars have been used to determine the well known Balmer formula for the wavelength of hydrogen lines in the late 19th century Since then spectroscopy has made enormous progress in stellar atmosphere studies in kinematics and in the detection of high redshifts in the Universe The traditional techniques of obtaining wide field spectroscopic data are based on slitless spectroscopy objective prism Several observations world wide make use of these tech

niques in order to obtain information on the spectral properties of objects in large areas of the sky     *Postcolonial Thought and Social Theory* Julian Go, 2016-09-23 Postcolonial Thought and Social Theory maps the convergences and differences between these two seemingly opposed bodies of thought It explores the different waves of postcolonial thought elaborates the postcolonial critique of social theory and charts different strategies for crafting a postcolonial social science     **Atlas of Wide-field-of-view Outgoing Longwave Radiation Derived from Nimbus 7 Earth Radiation Budget Data Set** Thomas Dale Bess, 1987     Atlas of Wide-field-of-view Outgoing Longwave Radiation Derived from Nimbus 6 Earth Radiation Budget Data Set - July 1975 to June 1978 T. Dale Bess, George Louis Smith, 1987 An atlas of monthly mean outgoing longwave radiation global contour maps and associated spherical harmonic coefficients Contains 36 months of continuous data from July 1975 to June 1978 The data were derived from the first Earth radiation budget experiment which was flown on the Nimbus 6 Sun synchronous satellite in 1975     **Probing Galaxy Evolution by Unveiling the Structure of Massive Galaxies Across Cosmic Time and in Diverse Environments** Timothy Weinzierl, 2014-07-17 Awarded the American Astronomical Society AAS Rodger Doxsey Travel Prize and with a foreword by thesis supervisor Professor Shardha Jogee at the University of Texas at Austin this thesis discusses one of the primary outstanding problems in extragalactic astronomy how galaxies form and evolve Galaxies consist of two fundamental kinds of structure rotationally supported disks and spheroidal triaxial structures supported by random stellar motions Understanding the balance between these galaxy components is vital to comprehending the relative importance of the different mechanisms galaxy collisions gas accretion and internal secular processes that assemble and shape galaxies Using panchromatic imaging from some of the largest and deepest space based galaxy surveys an empirical census of galaxy structure is made for galaxies at different cosmic epochs and in environments spanning low to extremely high galaxy number densities An important result of this work is that disk structures are far more prevalent in massive galaxies than previously thought The associated challenges raised for contemporary theoretical models of galaxy formation are discussed The method of galaxy structural decomposition is treated thoroughly since it is relevant for future studies of galaxy structure using next generation facilities like the James Webb Space Telescope and the ground based Giant Magellan Telescope with adaptive optics     **Wide Field Spectroscopy and the Distant Universe** Herstmonceux Conference 1994, Cambridge, England, 1995 Galaxies represent the most readily visible fabric of the cosmos Their morphological types luminosities and environmental surroundings contain valuable clues as to their origin and evolution Locally a strong correlation is seen between galaxy morphology and environmental location this may have been molded at surprisingly modest redshifts Spectroscopic and photometric studies of deep fields also suggest remarkably recent changes in the galaxy population The associated growth of structure during the same interval can be tracked via X ray studies of distant clusters of galaxies Very recently impressive observational facilities have been completed each of which has extended the astronomers dataset to look back times where such evolutionary effects can be studied This

volume discusses surveys which share a common theme the need for a large number of ground based spectra It focuses on the various approaches via a single theme concerned with the evolution of galaxies and their distribution In the near future impressive new observational facilities will be able to generate large statistical spectroscopic surveys and the aim of this volume is to assess the scientific impact that ongoing and future spectroscopic surveys can make Emphasis is placed on the role of non optical and satellite facilities and the co ordination of international efforts Publisher s website
