Action Semantics Peter D. Mosses, 1991 **Action Semantics** Peter Mosses, 1992-08-13 Action Semantics is a comprehensive introduction to the semantics of programming languages It will be of use to graduates of computer science and mathematics **Semantics and Algebraic Specification** Jens Palsberg, 2009-09-19 This Festschrift volume published to honor Peter D Mosses on the occasion of his 60th birthday includes 17 invited chapters by many of Peter's coauthors collaborators close colleagues and former students Peter D Mosses is known for his many contributions in the area of formal program semantics In particular he developed action semantics a combination of denotational operational and algebraic semantics The presentations given on a symposium in his honor in Udine Italy on September 10 2009 were on subjects related to Peter's many technical contributions and they were a tribute to his lasting impact on the field Topics addressed by the papers are action semantics security policy design colored petri nets order sorted parameterization and induction object oriented action semantics structural operational semantics model transformations the scheme programming language type checking action algebras and denotational semantics **Semantics of Programming Languages** Carl A. Gunter, 1992 Semantics of Programming Languages exposes the basic motivations and philosophy underlying the applications of semantic techniques in computer science It introduces the mathematical theory of programming languages with an emphasis on higher order functions and type systems Designed as a text for upper level and graduate level students the mathematically sophisticated approach will also prove useful to professionals who want an easily referenced description of fundamental results and calculi Basic connections between computational behavior denotational semantics and the equational logic of functional programs are thoroughly and rigorously developed Topics covered include models of types operational semantics category theory domain theory fixed point denotational semantics full abstraction and other semantic correspondence criteria types and evaluation type checking and inference parametric polymorphism and subtyping All topics are treated clearly and in depth with complete proofs for the major results and numerous exercises Theoretical Computer Science: Exploring New Frontiers of Theoretical Informatics Jan Leeuwen, 2000-07-26 This book constitutes the refereed proceedings of the International Conference IFIP TCS 2000 held in Sendai Japan in August 2000 The 32 revised full papers presented together with nine invited contributions were carefully reviewed and selected from a total of 70 submissions The papers are organized in two tracks on algorithms complexity and models of computation and on logics semantics specification and verification The book is devoted to exploring new frontiers of theoretical informatics and addresses all current topics in theoretical computer science Semantics and Logics of Computation Andrew M. Pitts, P. Dybjer, 1997-01-30 The aim of this volume is to present modern developments in semantics and logics of computation in a way that is accessible to graduate students The book is based on a summer school at the Isaac Newton Institute and consists of a sequence of linked lecture course by international authorities in the area The whole set have been edited to form a coherent introduction to these topics

most of which have not been presented pedagogically before *Mathematical Foundations of Computer Science 1996*
Wojciech Penczek, Andrzej Szalas, 1996-08-07 This book constitutes the refereed proceedings of the 21st International Symposium on Mathematical Foundations of Computer Science MFCS 96 held in Crakow Poland in September 1996 The volume presents 35 revised full papers selected from a total of 95 submissions together with 8 invited papers and 2 abstracts of invited talks The papers included cover issues from the whole area of theoretical computer science with a certain emphasis on mathematical and logical foundations The 10 invited presentations are of particular value **Mathematical**

Foundations of Computer Science 1999 Mirosław Kutylowski, Leszek Pacholski, Tomasz Wierzbicki, 2007-07-16 This volume contains papers selected for presentation during the 24th International Symposium on Mathematical Foundations of Computer Science held on September 6-10 1999 in Szklarska Poręba Poland The symposium organized alternately in the Czech Republic Slovakia and Poland focuses on theoretical aspects and mathematical foundations of computer science The scientific program of the symposium consists of five invited talks given by Martin Dyer Dexter Kozen Giovanni Manzini Sergio Rajsbaum and Mads Tofte and 37 accepted papers chosen out of 68 submissions The volume contains all accepted contributed papers and three invited papers The contributed papers have been selected for presentation based on their scientific quality novelty and interest for the general audience of MFCS participants Each paper has been reviewed by at least three independent referees PC members and or sub referees appointed by them The papers were selected for presentation during a fully electronic virtual meeting of the program committee on May 7 1999 The virtual PC meeting was supported by software written by Artur Zgoda Ph D student at the University of Wrocław The entire communication and access to quite a sensitive database at PC headquarters in Wrocław was secured by cryptographic protocols based on technology of certificates *Comparative Metric Semantics of Programming Languages* Franck van Breughel, 2012-12-06

During the last three decades several different styles of semantics for programming languages have been developed This book compares two of them the operational and the denotational approach On the basis of several examples we show how to define operational and denotational semantic models for programming languages Furthermore we introduce a general technique for comparing various semantic models for a given language We focus on different degrees of nondeterminism in programming languages Nondeterminism arises naturally in concurrent languages It is also an important concept in specification languages In the examples discussed the degree of nondeterminism ranges from a choice between two alternatives to a choice between a collection of alternatives indexed by a closed interval of the real numbers The former arises in a language with nondeterministic choices A real time language with dense choices gives rise to the latter We also consider the nondeterministic random assignment and parallel composition both couched in a simple language Besides nondeterminism our four example languages contain some form of recursion a key ingredient of programming languages

Computer Science Logic Jörg Flum, Mario Rodríguez-Artalejo, 1999-09-08 The 1999 Annual Conference of the European

Association for Computer Science Logic CSL 99 was held in Madrid Spain on September 20 25 1999 CSL 99 was the 13th in a series of annual meetings originally intended as International Workshops on Computer Science Logic and the 8th to be held as the annual Conference of the EACSL The conference was organized by the Computer Science Departments DSIP and DACYA at Universidad Complutense in Madrid UCM The CSL 99 program committee selected 34 of 91 submitted papers for presentation at the conference and publication in this proceedings volume Each submitted paper was refereed by at least two and in almost all cases three different referees The second refereeing round previously required before a paper was accepted for publication in the proceedings was dropped following a decision taken by the EACSL membership meeting held during CSL 98 Brno Czech Republic August 25 1998
