

Activity and Activity Coefficients

In presence of strong electrolytes of diverse ions, weak electrolytes tend to dissociate more. This behavior is attributed to the shielding effects exerted by the ions of the strong electrolyte on the ionic species of opposite signs from the weak electrolyte. The result is extra dissociation of the weak electrolyte. The concentration of an ion, from a weak electrolyte, in presence of strong electrolyte is called the activity of the ion and is defined by the relation:

$$a_i = C_i f_i$$

Where a_i is the activity of the ion i , C_i is the concentration of ion i , and f_i is the activity coefficient of ion i .
