High Frequency Over-the-Horizon Radar (PB) Giuseppe Aureliano Fabrizio, 2013-07-12 THE MOST COMPLETE GUIDE TO HIGH FREQUENCY OVER THE HORIZON RADAR SYSTEMS Written by a leading global expert on the topic High Frequency Over the Horizon Radar provides in depth coverage of the signal processing models and techniques that have significantly advanced OTH radar technology This pioneering work describes the fundamental principles of OTH radar design and operation and then delves into the mathematical modeling of HF signals received by actual OTH radar systems based on experimental data analysis Numerous examples illustrate the practical application of modern adaptive signal processing techniques to real and simulated OTH radar data This authoritative text covers skywave and surface wave systems and is an invaluable resource for researchers engineers and practitioners working with OTH radar systems and technologies

Key Features Offers a thorough and accurate treatment of essential concepts ranging from system design and operation through to signal processing methods and their practical application Provides clear explanations of fundamental principles for scientists engineers students practitioners technicians managers and other professionals starting out in this field Offers a detailed coverage of theoretical and applied signal processing concepts and techniques that have become a cornerstone for the effective operation of real world OTH radar systems Fills a long standing void in the contemporary OTH radar literature with over 350 illustrations color figures available for download and over 500 references

Microwaves, Millimeter Wave and Terahertz Liquid Crystals Anyong Qing, Yizhe Zhao, Zhiyong Zhang, 2024-03-05 This book is the first ever monograph

on nematic liquid crystals for microwaves millimeter waves and terahertz waves It presents the first hand independent studies on nematic liquid crystals for microwaves millimeter waves and terahertz waves This book opens with an introduction to generic liquid crystals and a retrospective review about nematic liquid crystals in microwaves millimeter waves and terahertz waves Attention is then focused on the latest in house progress on microwave millimeter wave and terahertz nematic liquid crystals Synthesis and characterization of novel nematic liquid crystals are first presented followed by indigenous technologies to manufacture functional nematic liquid crystal devices for microwaves millimeter waves and terahertz waves A few self developed representative advanced functional devices are shown to demonstrate the promising perspective of liquid crystals for not only microwaves millimeter waves and terahertz waves but also many other non display applications The presented studies will attract scientists engineers and students from various disciplines such as materials chemical electrical biological and biomedical engineering The book is intended for undergraduates graduates researchers professionals and industrial practitioners who are interested in developing novel liquid crystals and further extending liquid crystals beyond display

Nanoplasmonics Carlos J. Bueno-Alejo, 2020-04-22 During the last few years nanomaterials have attracted the attention of the scientific community due to their extraordinary and unique properties Their small size and the distinctive features that come with it makes these materials very attractive for use in different important fields like biomedicine sensors or catalysis One of the most important properties of these materials is their interaction with light and is called surface plasmon resonance It is a phenomenon that happens on the surface of certain nanomaterials that confers them with unique properties This remarkable characteristic has opened a whole new field called nanoplasmonics that is acquiring more and more importance among the scientific community This book aims to review the state of the art in this new field and provide the reader with a wide overview of the new nanomaterials available and their current and future applications
