Emission Trajectories and Mitigation Schemes for China Kai Fang, Qifeng Zhang, Yiqi Tang, 2023-11-21 This book seeks to model the possible emission trajectories and identify the feasible mitigation schemes for China to meet its climate commitments to peak emissions before 2030 and net zero emissions before 2060 In line with these ambitions China has taken a number of measures to improve carbon efficiency and energy structure in recent years The book first analyzes changes in the carbon footprint at the city level identify the different pathways to peak emissions by province and industry and develop a bottom up approach to determining when and how China could reach peak emissions It then illustrates how the Emissions Trading Scheme ETS reduces abatement costs and examines the cost saving effects under carbon intensity reduction and peak emissions targets Based on the findings and the status quo in China the authors propose a multicriteria allocation scheme for carbon emission allowances at the provincial level and quantify the impact of sectoral coverage on the abatement costs of the ETS by developing a cost based approach to sectoral coverage in China In addition the co benefits between CO<sub>2</sub> and PM<sub>2.5</sub> reductions as a result of the ETS operation are elaborated The book will benefit researchers and policy makers interested in environmental governance climate policy environmental economics and sustainable development

Modeling and Simulation of Carbon Emission Related Issues Wen-Hsien Tsai, 2019-08-19 Carbon emissions reached an all time high in 2018 when global carbon dioxide emissions from burning fossil fuels increased by about 2.7% after a 1.6% increase in 2017 Thus we need to pay special attention to carbon emissions and work out possible solutions if we still want to meet the targets of the Paris climate agreement This Special Issue collects 16 carbon emissions related papers including 5 that are carbon tax related and 4 energy related papers using various methods or models such as the input output model decoupling analysis life cycle impact analysis LCIA relational analysis model generalized Divisia index model GDIM forecasting model three indicator allocation model mathematical programming real options model multiple linear regression etc The research studies come from China Taiwan Brazil Thailand and United States These researches involved various industries such as agricultural industry transportation industry power industry tire industry textile industry wave energy industry natural gas industry and petroleum industry Although this Special Issue does not fully solve our concerns it still provides abundant material for implementing energy conservation and carbon emissions reduction However there are still many issues regarding the problems caused by global warming that require research

to carbon emitting sources namely fossil fuels On the other hand the Covid 19 pandemic and the economic Project Overview 20 March 2021 08 39 Page 6 of 9 downturns shrank the global energy demand including fossil fuels resulting in a sharp drop in their prices Low fossil fuel prices are harmful to developing renewable energy projects making solar wind and other renewable energy resources less competitive as sources of electricity This is endangering the Paris agreement and the Climate Action goal of the United Nations Given the high share of fossil fuels in the energy mix of the members of ASEAN tremendous challenges must be faced for their energy transition in the post Covid 19 world The authors call for sound policy and applicable technologies to ensure sustainable energy availability accessibility and affordability to reach emission reduction targets *Climate Change and Developing Countries* Nijavalli H. Ravindranath, Jayant A. Sathaye, 2005-12-16

Among global environmental issues climate change has received the largest attention of national and global policy makers researchers industry multilateral banks and NGOs Climate change is one of the most important global environmental problems with unique characteristics It is global long term up to several centuries and involves complex interactions between climatic environmental economic political institutional and technological pressures It is of great significance to developing countries as all the available knowledge suggests that they and particularly their poorer inhabitants are highly vulnerable to climate impacts The projected warming of 1.4 to 5.8 C by 2100 and the related changes in rainfall pattern rise in sea level and increased frequency of extreme events such as drought hurricanes and storms are likely to threaten food security increase fresh water scarcity lead to decline in biodiversity increase occurrence of vector borne diseases cause flooding of coastal settlements etc Recognizing the potential threat of severe disruptions the United Nations Conference on Environment and Development was organized in 1992 in Rio de Janeiro Brazil to begin to address ways to reduce these impacts which led to the formulation of the UN Framework Convention on Climate Change This Convention and the subsequent Kyoto Protocol recognize the common but differentiated responsibility of developing and industrialized countries in addressing climate change Developing countries thus have a unique role to play in formulating a sound reasoned and well informed response to the threat of climate change
